TITLE: Effecient Scheme for Blast-furnace Charging (Ratsional'naya skhema zagruzki domennoy pechi)

PERIODICAL: Metallurg, 1958, Nr 9, pp 10 - 12 (USSR)

ABSTRACT: The scheme described (figure) was evolved at the Magnitogorsk Metallurgical Kombinat by V.M. Zudin, N.S. Krivolapov, N.S. Reyzov, I.I. Sagaydak, V.A. Shastin and L.Ya. Shparber. Hot sinter is charged into two bunkers of 850 m<sup>3</sup> capacity each, provided with two cooled roll feeders, each discharging onto vibrating screens of a non-blocking type. The fines are returned via a small skip hoist to a bunker. The blast-furnace sinter goes into a weighing hopper which collects the appropriate weight and then gives a signal which stops the roll feeders. When the hopper has discharged into the blast-furnace skip and closed, the feeders are automatically set into operation. The ore and flux are fed into the weighing hopper from their bins by light rubber belts. The two roller-feeder coke bins each have their own screens and weighing hoppers. The coke passes via rapid belts and chutes to the main skip at the appropriate time; the coke breeze is removed in the ordinary way. The author describes how the new

Card1/2

Efficient Scheme for Blast-furnace Charging

SOV/130-58-9-4/23

system can be partly installed at a plant during running repairs and during major repairs. The compactness of the layout enables space to be saved and the scheme enables fines to be removed directly before the skip (or the burden can be sized and charged separately), the charging to be made completely automatic, the scale car to be eliminated and working conditions with hot sinter to be improved. The proposed system has advantages over a purely belt system or one in which an automatic scale car is used. There is 1 figure.

AUTHOR: Shparber, L. Ya.

TITLE: Mechanization and Automation of a Blast Furnace Shop

PERIODICAL: Metallurg, 1960, No. 11, pp. 6-9

TEXT: Information is given on the automation of various installations at the blast furnace shop of the Magnitogorsk Metallurgical Combine. Scale-cars are being replaced by two automated charge systems: In system 1) coke, sinter ore, and admixtures are supplied by three lines. Coke is delivered as previously passing from the bin through the screener and the weighing hopper. Sinter is supplied from the bin to a plate conveyer and to the hopper. There are 2 plate conveyers arranged at two sides of the skip pit and switched-on automatically. System 2) includes a large-capacity bin for sinter and small bins with plate conveyers for coke which are arranged at both sides of the sinter bin from which the material is delivered by three drum stoppers. The outer stoppers are intended to supply sinter to the left and right hand side hoppers and the central stopper provides for the alternating charge of the hopper with the aid of a reversing gate. Coke passes from the bin through the screener, the conveyer and the w

Mechanization and Automation of a Blast Furnace Shop

weighing hopper. The left and right hand side hoppers may be charged from any bin with the aid of a reverse valve. The author recommends the method of tensometric weighing and the installation of a partition into the weighing hopper for coke, dividing the hopper into 2 compartments which will permit the automatic control of the coke size. Steam supply is made safer, reducing the wear of the large cone rod, preventing the ejection of the charge when opening the small cone etc. Improvements have been made to facilitate the work of hearth attendants. However, the installation of various machines for the cleaning of runners, the lining of runners with refractories, for the exchange of cooling devices, etc. is still required. Air heaters are now being made with automatic reverse valves and pulses produced by a time relay or when completely closing the mixing valve. Each heater may be in one of three basic positions ("heat", "blast", "separation") or in special "traction" position. The control is automatic, cyclic or individual. The laboratory of automatics, the TsPKB and the blast furnace shops are occupied to develop automation of remote control units in two directions: a) Taking gas samples and measuring the temperature at individual spots of the furnace radius, and b) the continuous checking of the temperature and the CO<sub>2</sub> content during the motion of the sampling pipes. Work is also directed on the automatic control of pressure drop, conditions of tuyere hearths and the

Title : The Sensitivity of Animals of Different Ages to General Roentgen Irradiation.

Orig Pub: Tr. Vses. konferentsii po med. radiol. Eksperim. med. radiol. M., Medgiz, 1957, 76-81.

Abstract: Rats (265) of various age groups were irradiated with a dose of 250-1000 r. Animals up to 6 weeks old turned out to be more radiosensitive than adults. Newborn rats were distinguished by the greatest radio sensitivity; they died without exception even after 250 r. In rats 2-15 days old, radiation sickness developed somewhat more slowly

Shparo, L. A., T. V. Fokina, T. D. Mirimova, Z. A. Rassadina, T. M. MeI'gunova, and K. A. Moskacheva

Osobennosti reaktsii rastushchego organizma na deystviye ioniziruyushchey radiatsii. (The Peculiarities of the Reactions of a Growing Organism to the Effect of Ionizing Radiation) Moscow, Medgiz, 1960. 177 p. Errata slip inserted. 4,000 copies printed.

Ed.: Ye. F. Baranova. Tech. Ed.: N. S. Kuz'mina.

**PURPOSE:** This book is intended for biologists, physiologists, and other specialists concerned with the effects of ionizing radiation on the human organism.

**COVERAGE:** The book reports on investigations of the effects of ionizing radiation on humans and animals at different ages, ranging from infancy to maturity. The total reaction of an organism, manifested by its general sense of well-being, behavior, variation in weight, longevity, condition of blood, external condition of skin, etc., as well as the disturbances in individual organs, tissues, and their functioning are discussed. The

work is based on studies conducted at the Radiobiological Laboratory of the Institut pediatrii AMN SSSR (Institute of Pediatrics of the Academy of Medical Sciences of the USSR) on the reactions of laboratory animals as well as children exposed to radiation in the course of x-ray therapy. The following scientists are mentioned as having made significant contributions recently in this field of research: K. K. Poplavskiy, O. P. Peterson, A. V. Kozlova, V. F. Cherkasov, Ye. A. Dikovenko, I. A. Volodina, M. A. Aleksandrovskaya, V. A. Troitskiy, A. G. Izergin, A. M. Rusanov, V. V. Kholin, A. P. Chesnokova, A. I. Osipovskiy, T. N. Ulissova, G. S. Kunicheva, A. P. Yegorov, V. V. Bochkarev, and M. P. Domshlak. There are 250 references: 190 Soviet, 43 English, 16 German, and 1 French.

TITLE: New platinum resistance thermometers

SOURCE: Izmeritel'naya tekhnika, no. 5, 1964, 19-21

TOPIC TAGS: thermometer, resistance thermometer, platinum resistance  
thermometer

ABSTRACT: Soviet-make resistance thermometers for a  $-200+500^{\circ}\text{C}$  range with platinum wire wound on a mica form have shown these shortcomings: (a) poor seal, (b) mechanical weakness, (c) unwieldy design, and (d) high thermal inertia. A new design, free from the above drawbacks, consists of four helices, made from 0.05-0.07-mm Pt wire, placed in channels in a ceramic cartridge; the channels are subsequently filled with alumina powder. Temperature measurements up to  $700^{\circ}\text{C}$  are possible. These types are developed and offered for production:

Sterols of the animal organism: 7-hydroxy- $\alpha$ -cholesterol.  
 L. S. V. Nedzvetskii, A. N. Panyukov, and T. A. Shpats  
 (Leningrad Med. Inst., Chair Biol. Chem. *Biokhimiya*  
 18, 315-18(1953).—Dogs received 0.5 g. of cholesterol and 2  
 g. of fat per kg. body wt. for 10-12 days and were then sacri-  
 ficed. The blood was dild. with 4 vols. of acetone and the  
 minced organs were treated similarly with acetone. Re-  
 peated extns. with acetone were made and the acetone frac-  
 tions were combined, evapd. residue extd. with ether, fil-  
 tered and 20-30 ml. EtOH added to the filtrate. The ether  
 was evapd. and the alc. residue washed with alc. into a  
 conical tube and let stand overnight. A ppt. formed con-  
 sisting of fat, cholesterol, and its esters. The supernatant,  
 contg. the same as well as other sterols, was sepd. from the  
 ppt., the alc. evapd., and a chromatographic adsorption on  
 Al oxide was made of a soln. of the residue. 7-Hydroxy- $\alpha$ -  
 cholesterol is formed in the animal organism. It was iso-  
 lated from brain, lungs, and the blood and none from the  
 liver and muscle.
