

Production of Heavy Forgings; (Cont.)

SOV/6162

COVERAGE: The book reviews technological problems of forging large steel ingots. The effect of reduction and conditions of deformation on the quality of forgings is discussed on the basis of research work done at heavy-machinery plants of the USSR. The book offers practical suggestions on improving the quality of large forgings and reducing the amount of labor required to produce them. I. Ya. Chernikhova, V. I. Tarnovskiy, and V. P. Bakharev took part in preparing the copy for publication. There are 193 references, mostly Soviet.

SOKOLOV, I.G.

Sokolov, I. G. The remainder term in the Fourier series of differentiable functions. L'vov. Gos. Univ. Uč. Zap. 29, Ser. Meh.-Mat. no. 6 (1954), 82-87. (Russian)
The author transforms the Lebesgue constants L_n [Zygmund, Trigonometrical series, Warsaw-Lwów, 1935, p. 172] into a form suitable for numerical calculation and tabulates L_n for $n=1(1)10, 5D$. He calculates numerically the coefficients in the asymptotic formula

$$L_n = a_1 \log(2n+1) + a_2 + a_3(2n+1)^{-2} + O(n^{-3}).$$

Let W_r be the class of functions of period 2π with r th derivative bounded by M ; let $H_n^{(r)} = \sup E_n(f)$ for $f \in W_r$, where E_n denotes best approximation by trigonometric

polynomials. Then [Ahiezer, Lectures on the theory of approximation, OGIZ, Moscow-Leningrad, 1947, p. 207; MR 10, 33] $H_n^{(r)} = 4\pi^{-1} K_r (n+1)^{-r} M$, where K_r is expressed in terms of Bernoulli and Euler numbers. The author tabulates $4\pi^{-1} K_r$ for $r=1(1)10, 4D$.

AUTHOR: Sokolov, I.I. (Moscow) 47-4-9/20

TITLE: It is Necessary to Define More Accurately the Concept "Foundations of Physics" (Neobkhodimo utochnit' ponyatiye "Osnovy Fiziki")

PERIODICAL: Fiziki v shkole, 1957, pp 57-58 (USSR)

ABSTRACT: This and the following article are printed in consequence of the discussion on the contents of the course in physics and the problems of polytechnical instruction in No 2, 1957, of this periodical. The author expresses the opinion that without a preliminary determination as to what the foundations of physics represent, a proper program in physics cannot be built up. Even in the book of N.K. Goncharov "Foundations of Pedagogy" (Osnovy pedagogiki) this question is not included, and the author shares the opinion of V.F. Yus'kovich that the notion "foundation of science" is not an absolute idea, but a historical one which changes with the development of science itself. Thus, for instance, one cannot but include into the foundations of science the data on atomic physics or semiconductors although both are recent achievements. The author quotes the concept of V.F. Yus'kovich in regard to what should be understood by "foundations of physics" and suggests that the

Card 1/2

47-4-9/20

It is Necessary to Define More Accurately the Concept "Foundations of Physics"

question be placed before public opinion. The author also speaks for a graduated distribution of the school course in physics considering it a great progressive achievement of the Soviet method.

AUTHOR: Sokolov, I.I., Professor 47-4-4/20

TITLE: The Development of the Method of Teaching Physics in the USSR
(Razvitiye metodiki prepodavaniya fiziki v SSSR)

PERIODICAL: Fizika v shkole, 1957, No 4, pp 31-42 (USSR)

ABSTRACT: The article sets forth briefly the backward conditions prevailing in Tsarist Russia as to physics instruction at the end of the 19th and beginning of 20th century. It enumerates the then existing pedagogical societies and circles and the congresses of teachers of physics and chemistry which took place at that time. It mentions 3 veteran teachers, the Professors P.A. Znamenskiy, Leningrad, N.V. Kashin, Moscow, and S.P. Slyusarevskiy, Kiyev, who are still alive. It quotes a number of textbooks and their authors, which were then in use, and handbooks on the method of teaching physics. The author then gives a detailed review of the development of Soviet methods of instruction in physics to the present time. Two since dissolved institutes of school work methods built the foundation for the methodical section for physics of the Institute of Instruction Methods, Academy of Pedagogical Sciences (Laboratoriya metodiki fiziki instituta metodov obucheniya akademii pedagogicheskikh nauk), which was founded in 1943. The Section

Card 1/4

The Development of the Method of Teaching Physics in the USSR 47-4-4/20

continues to organize regular meetings of physic teachers. In the course of years, institutes for the improvement of teacher qualifications were established in Oblast' centers; their Chairs of Physics assist teachers in systematizing the program material, working out methods of instruction for the different subjects and conducting laboratory work. In addition to the universities (about 40), where physic teachers are trained, there are more than 100 pedagogical institutes pursuing the same object. The author refers to another work of his about to be printed in the "Scientific Transactions" of the Moscow State Pedagogical Institute imeni V.I. Lenin (*Uchenyye zapiski Moskovskogo gosudarstvennogo pedagogicheskogo institut imeni V.I. Lenina*) dealing more closely with the physico-mathematical faculties of these institutes. The measures introduced for the teaching of physics repeatedly failed and had to be abandoned. Thus, f.i. the so-called "method of projects" was copied from the elementary schools of the USA and introduced in all schools beginning with the elementary up to the Vuz, but it proved to be detrimental and hampered the development of the methods of instruction. At last, for the scholastic year 1954/55, a program for physics was approved which had been prepared by the Main Administration for Schools of the RSFSR Ministry of

Card 2/4

The Development of the Method of Teaching Physics in the USSR 47-4-4/20

Education (Glavnoye upravleniye shkol ministerstva prosveshcheniya RSFSR) and the Institute for Methods of Instruction of the APN (Institut metodov abucheniya APN). The article enumerates the positive sides of the program. Among others it states that the practical training in mechanical and electrical engineering at the secondary schools should extend the knowledge conveyed to the students during the course in physics. All the schools of the Russian Federation work according to the 1955/56 plan except 500 at which a new school plan has been introduced as a trial. The directives of the 20th Party Congress provide for the realization of general secondary education and a development of polytechnical training at the schools of general education during the Sixth 5-Year Plan. From the new experimental school plan, which was approved on 3 August 1956, a table shows the number of hours in physics and other newly introduced subjects which aim at the increase of polytechnical training given in each of the years of a 10-year secondary school. For practical training, 216 hours are provided for city schools, and 288 for country schools. The duration of the school year is increased to 34 weeks. The article contains more particulars of the experimental plan for the 500 schools and deals closely with the results

Development of the Method of Teaching Physics in the USSR

47-5-4/16

justified expectations, it has been introduced into a considerable number of schools. The plan covers industrial and agricultural production, mechanical engineering and electro-technics. In the course of studying physics, the students become convinced of the materiality of the world, the objectivity of the laws of nature and the possibility of their perception thru science. Thus, the foundations for a dialectic-materialistic concept and an atheistic conviction are formed within the student. Endeavors have constantly been made to strengthen the experimental method of instruction by demonstrations and home experiments. Much attention has also been paid to the supply of required equipment by the Ministry and by several school-patronizing industrial enterprises. Mention is made of a technical-teaching industry of the RSFSR Ministry of Education producing hundreds of millions of rubles worth of apparatuses, but yet there is a lack in school laboratory equipment. The next section is entitled "Textbooks on Physics for Secondary Schools" and contains a chronological review of the textbooks published during the last 40 years giving the authors' names and an evaluation of their usefulness. The author admits that the schools have no modern textbooks on physics which completely satisfy the needs. Reference, how-

Card 2/4

Development of the Method of Teaching Physics in the USSR

47-5-4/16

ever, is made to the "Elementary Textbook on Physics", published 1948-1952 in 3 volumes under the editorship of Academician G.S. Landsberg, which helped many students in their studies. For the teachers it is very valuable, as it gives them a deeper explanation of various physical phenomena, laws and theories. This applies also to the "Course in Physics" by N.P. Tret'yakov published in 1952 by the Uchpedgiz (Gosudarstvennoye izdatel'stvo uchebnoy i pedagogicheskoy literatury) which is an aid to secondary school teachers. In connection with the new teaching plan, textbooks are being revised and new ones issued. At the end of 1955, an All-Union Conference on textbooks in Moskva discussed the problem of a textbook on physics for the 8 - 10th class's as to the teaching method, system of exposition etc. A section of the article deals with the textbooks on physical problems published during the Soviet regime, and gives an opinion of their merits. Emphasis is also laid on the technical character of these problems in connection with polytechnical instruction. The next paragraph enumerates and evaluates a number of hand-books issued on the method of teaching physics, giving the authors' names, year of publication and an evaluation of them. Another section handles the extra curricular studies in physics in student circles as the main

ABSTRACT: On January 10, 1959, N. V. Kashin, one of the oldest Professors of Physics of Russia, Doctor of Pedagogical Sciences, a scientist of great merit, Holder of the Chair of Physics at the Moskovskiy gornyy institut (Moscow Institute of Mining) died at the age of 87. His scientific training is first briefly described, and in the following his pedagogical activities are dealt with. From 1925 - 1930 he was in charge of the Chair for the Methodology of Physics at the 2. Moskovskiy gosudarstvennyy universitet (2nd Moscow State University), after which he worked at the Chair for Physics at the Moscow Mining Institute. Besides his scientific and pedagogical activities he devoted his attention to scientific societies. Already in 1899 he became a member of the Pedagogical Society of Moscow University (Physics Department, Director Professor N. A. Umov). In this society he was head of the laboratory committee.

USSR/ Biology - Zoology

Card 1/1 : Pub. 86 - 5/39
Authors : Sokolov, I. I., Dr. Biol. Sc.
Title : ~~.....~~ Biological peculiarities of domestic animals and their wild ancestors
Periodical : Priroda 14/3, 48 - 55, Mar 1955
Abstract : Radical differences between domestic animals and their wild ancestors are attributed to the speeding up of evolutionary processes through artificial selection. Although the usefulness of certain animals apparently played a role in their selection for domestication the author finds that certain animals by nature are more amenable to domestication than others. Certain wild animals which are useful to mankind, but which have never been domesticated, are discussed and traits are pointed out in them which are the apparent causes of failure to domesticate them. Nine references; 8 Soviet, 1 German, (1934 - 1953). Illustrations.

Title : On Phenomena of Cell Nuclei Fusion

Orig Put : Arkhiv anatomii, gistol. i embriologii, 1955, 32, No 4, 54-62

Abstract : A colchicine solution, distilled water, ammonium σ -nitronaphthalene and other substances were injected into body cavities of locusts *Omocestus viridulus* L., *Chorthippus albomarginatus* D.C., *Ch. parallelus* Zett., after which the seminal vesicles were examined. In individual spermatocysts single gigantic cells (GC) were observed. Fusion of cells may involve different stages of spermatogenesis, from young spermatocytes to spermatids, inclusive. Gigantic nuclei (GN) are encountered especially frequently at the pachytene stage. The fusion process begins with a gradual disappearance of cell borders and fusion of plasmatic bodies in adjacent cells, as a

Card : 1/2

USSR/APPROVED FOR RELEASE: 08/25/2000 CIA-RDP86-00513R001652010012-3"

Abs Jour : Ref Zhur - Biol., No 3, 1958, No 9425

result of which multinucleate spermatocysts are formed. Finally GN are formed at different polyploid stages. Spermatid fusions are also encountered in the prosperrn stage when different polyploid stages are observed which are expressed in a number of centrioles (noted here are spermatids with 14 centrioles). After existence for some time the GC degenerate. The author points out that the presence of GC is the result of local changes in physiological conditions. The non-specific action of the chemical substance used is emphasized. The author believes that taxis plays a part in the process of nuclei fusion. He considers the phenomenon of nuclei fusion as a regulatory process, as a result of which there is a diminution of mutual interchange between the nucleus and cytoplasm, also as a protective reaction, manifested under unfavorable conditions.

Title : Formation of Karyomeres During Reduction Divisions in Ornithodoros Papillipes Bir. (Ixodoidea).
Orig Pub : Tr. Leningr. o-va estestvoispyt., 1957, 73, №. 4, 46-51.

Abstract : At the end of anaphase I, the chromosomes of O. papillipes are located at considerable distances from one another. Near them, in the cytoplasm, rather large cysts are formed of different dimensions in the haploid number with a clear membrane and filled with karyolymph -- the so-called "primary karyomeres" (K). Chromosomes are

Card 1/3

11

Abs Jour : Ref Zhur - Biol., No 19, 1958, № 35543

distributed on their surface, but do not as yet penetrate them. Then a new cavity is formed around each chromosome, bordered by a thin membrane -- the "secondary" K. Subsequently, the "primary" and "secondary" K fuse with one another, forming a definitive K, and the corresponding chromosome plunges into its cavity. At first, the chromosomes show practically no change, but in time the interkinesis is alveolarized, lengthened, and forms a chromomeric structure. Individual K may fuse in a different manner. The data of this observation indicate comparative autonomy in the behavior of such nuclear components as chromosomes on the one hand and karyolymphs on the other. The karyolymphs

TITLE: Professor K. V. Urnov

SOURCE: Elektrichestvo, no. 3, 1965, 91

TOPIC TAGS: scientific personnel, academic personnel

ABSTRACT: Konstantin Vasilevich Urnov died on 11 December 1964 after a serious illness. He was a distinguished scientist and one of the oldest electro-polygraphists. He was born in 1907 and graduated from the Ivanovskiy Polytechnic Institute in 1929, after which he continued to work on the Board of Electric Installations for the next 25 years. His outstanding contribution was to relate successfully the activities of industry with those of the higher educational institutions. His name is closely linked to the development of domestic polygraphic machinery. He was imaginative, creative and bold. Since 1935 he was also engaged in teaching and scientific research work at the Moscow Power Institute and the Moscow Polygraphic Institute where he set up a course on "Electric Drives and Automation of Polygraphic Machines". He is the author of over 30 inventions and published works, including one book. He was a scientist-communist, a man of great knowledge, a good colleague and friend. Orig. art. has: 1 figure. [JPRS]
