Title: Temperature Dependence of the Electrical Conductivity of the
 $\text{Cu}_2\text{O}-\text{Ni}_2\text{O}_3$ System

Original

Periodical: Dokl. L'vovsk. politekhn. in-ta, 1955, Vol 1, No 2, 13-18

Abstract: The temperature dependence of the conductivity σ of samples obtained by sintering a mixture of 25% Ni_2O_3 and 75% Cu_2O was investigated. The linear function of $\lg \sigma = f(1/T)$ shows 2 breaks -- one at 140° and one at 230° . The energy of activation in the region below 140° is 0.7 ev; in the region $140-230^\circ$, 0.907 ev; and in the region $230-300^\circ$, 1.106 ev. The material is composed for utilization in the construction of thermistors.

5.8741AUTHORS: Andriyevskiy, A. I., Tret'yak, I. D.TITLE: Temperature Dependences of Semiconductor Thermo-Resistances of
Binary Oxide SystemsPERIODICAL: V. sb.: Poluprovodnik. termosoprotivleniya. Moscow-Leningrad,
Gosenergoizdat, 1959, pp. 82-95TEXT: The temperature behavior was investigated of semiconductor thermo-resistances produced on the base of the systems BeO - Cu₂O; MgO - Cu₂O; CaO - Cu₂O; ZnO - Cu₂O; MnO₂ - Cu₂O; and NiO₃ - Cu₂O. It is found out that the specimens of the ZnO - Cu₂O system have the specific resistance up to several thousand megohm at room temperature and a large value of the constant B (in the expression of the temperature dependence of resistance in $R = A_0 e^{B/T}$) in the temperature range from the room temperature up to 550°C, as well as a large negative transconductance of the volt-ampere-characteristic. The specimens of

Temperature Dependences of Semiconductor Thermo-Resistances of Binary Oxide Systems

the $\text{MnO}_2 - \text{CuO}_2$ system have a specific resistance of about 10^2 ohm.cm at room temperature. The value of the specific resistance of the $\text{NiO}_3 - \text{Cu}_2\text{O}$ system is of the order of $10^5 - 10^6$ ohm.cm at room temperature. The resistance of this system is susceptible to the pressure of the surrounding air.

Palenovodnoye termoprotivlyayushchim stoyat' (Thermistor) Collection of Articles. Moscow, Gosenergoizdat, 1959. 229 p. 13,000 copies printed.

Ed. (Title page): S. S. Potapov, Doctor of Technical Sciences, Professor; Ed. (Inside book): V. A. Petrov, Tech. Ed.; G. I. Matveyev, Editorial Board; S. S. Potapov, Doctor of Technical Sciences, Professor (Chief Ed.), N. P. Valday, Candidate of Technical Sciences, F. S. Zaytsev, Engineer; Ye. N. Shengaryev, Engineer, and V. I. Tarchata, Engineer.

PURPOSE: This collection of articles is intended for engineering and technical personnel of plants, GES, KII and also instructors and students of universities.

COVERAGE: The book contains articles dealing with problems of manufacture of thermistors and determining their parameters and characteristics. The author also discusses problems of industrial application of thermistors as control elements. The book is an effort of cooperation by scientists of a number of universities, members of KII and engineers of one of the plants (name is not given) of Moscoworiontron. No personalitites are mentioned. References appear at the end of some articles.

DISCUSSION: The author discusses optimum parameters of thermistors with direct and indirect heating and presents methods of calculating temperature characteristics of constant and power dissipation coefficient. He also discusses character voltage characteristics and presents methods of constructing a heating characteristic as well as methods of experimental determination of thermistor parameters. There are 4 references, all Soviet.

Macharev, G. F. Problems of Design of Thermistors for Circuits Based on Hall Effect. The author discusses operating conditions of thermistors used in circuits based on Hall effect and calculates thermistor parameters required in the design of thermistors. There are 5 references, all Soviet.

Ashkenasyan, A. I., and I. P. Trutnev. Temperature Characteristics of Thermistors Made From Various Materials. The author presents experimental temperature characteristics of two-oxide micaresists, Ba₂O₃; the author made from the following two-oxide mixtures: Ba₂O₃-ZnO₂; Ba₂O₃-CdO₂; Zn₂O₃-CdO₂; Mn₂O₃-CdO₂. They describe the importance of these mixtures in the design of new types of thermistors. There are 4 references, all Soviet (including 1 translation).

Prokof'yeva, Ye. D. Thermistors for Controlling Heating of an Automobile Engine. The author discusses fundamentals of manufacture of laboratory types of thermistors used as thermostatic elements in the automobile cooling system and presents thermistor characteristics. There are 2 English and 2 Soviet references.

Orshulin, T. T. Experimental High-temperature Thermistor. The author discusses the manufacture of laboratory-type thermistor used at temperatures 1,000 - 1,500°C and presents its basic characteristics. There are 9 references: 4 Soviet, 2 British and 3 German.

Sokolov, E. S. Analytical Methods of Determining Operating Conditions for Thermistors Using Alternating Current. The author discusses operating conditions of thermistors with the time constant much larger than the period of alternating current used. He also presents a method of calculating characteristic parameters such as current values, function Bar(t) etc. There are no references.

Bogatikyan, L. S. Voltage Stabilizer Circuits With Thermistors. The author presents fundamentals of voltage stabilizer circuits with thermistors and discusses methods of calculating circuit parameters. There is 1 Soviet reference.

Stal'yan, M. M. Dynamic Parameters of Thermistors With Indirect Heating. The author discusses introduction of resistors as elements of the automatic control of transmission level in a television receiver. In the television receiver, the author describes a transfer function of a thermistor and determines dynamic parameters of an indirect-heated thermistor. There are 5 references: 1 Soviet and 3 English.

Title : Temperature Dependence of the Electric Conductivity of the Cu₂O-Ni₂O₃ System

Orig Pub : Dokl. L'vovsk. politekhn. in-ta, 1955, 1, No 2, 13-18

Abstract : Specimens were prepared by pressing a mixture of 25% Ni₂O₃ and 75% Cu₂O, followed by sintering in an oven for 60 minutes at 1020±20°. The electric conductivity was measured in a vacuum at various temperatures with a Wheatstone bridge. The value of the activation energy, calculated from the temperature dependence of σ , is 0.700, 0.907 and 1.106 ev in the ranges of 50 -- 100, 150 -- 200, and 250 -- 300° respectively.

The thermal inertia of the specimen was measured by heating it in an evacuated tube to 300° and cooling the tube with the specimen in water. It turned out that the rate of change of specimen temperature, related to the temperature difference between the specimen and the surrounding medium at a given instant, was 0.44% per second. When

the specimen was dropped into oil or water, a voltage of unknown origin, up to 30 mw, appeared across its electrodes. The authors believe that this specimen can be used as a thermistor to measure temperatures from 60 to 300°.

TYPE: Electric conductivity of the system ZnO-BeO at not too high temperatures

SOURCE: Lvov. Universitet. Prilomya fizyky tverdoho tila (Problems in solid state physics). Lvov, Vyssh. shkola, 1971, p. 10.

TOPIC TAGS: zinc oxide, beryllium oxide, electric conductivity, temperature dependence

ABSTRACT: The authors investigated the temperature dependence of electric conductivity of the analytical samples with addition of BeO ('pure') up to 50%, with a view to the long-range order of the ZnO lattice. The results show that the conductivity of the samples with additions of BeO increases with increasing temperature, which is characteristic of the metal-like state.

The following table gives the values of the electric conductivity of the samples.

Title : Fruitbearing European beech in the Ukrainian SSR.

Orig Pub: Nauch. tr. Lvovsk. lesotekhn. in-ta, 1954, 1, 104-120

Abstract: Phenological observations and recording of fruit-bearing were conducted since 1916 in the Romanov forest collective in the Lvov region on types of fresh (?) beech and since 1947 in the Trans Carpathian oblast on types of fresh and moist beech. It was established that in the western regions of the Ukrainian SSR the European beech begins bearing fruit comparatively early: in forests at 40-45 years of age, when in the open or on forest fringes -- 10 years earlier. From 1916 to 1951 inclusive there were 10 abundant beech fruit-bearing years. Under optimal conditions for fresh and moist beech the quantity of

Card : 1/3

nuts fluctuated between 3920 - 9132 pieces. (1951 was the most abundant.) The regularity of the nutfall by decades is alike on all the territory of the beech tree area. On the average, the nutfall reaches a maximum between the 1st and 20th of October. The number of empty or damaged nuts is comparatively small -- from 12 to 23.4%, and it decreases from the beginning to the end of dropping. Under natural conditions of western regions and Soviet Carpathia from November to May of the following year, from 57.9% to 88.4% of beech seeds are destroyed, mainly because they are used as food by rodents and birds, and because of rotting. A considerable part of spring beech sprouts is destroyed before autumn of the same year for reasons of an ecological and biological character, and primarily from late frosts. One of the measures directed toward restoration and increase of beech woodstands is the rational utilization of the abundance of beech fruit bearing. A number of measures are re-

TITLE: Photocurrent oscillations in high-resistance GaAs

SOURCE: Fizika tverdogo tela, v. 7, no. 11, 1965, 3451-3452

TOPIC TAGS: gallium arsenide, photoconductivity

ABSTRACT: Low-frequency electrical oscillations are observed when high-impedance specimens of gallium arsenide are illuminated by monochromatic light in the 1.2μ region. These oscillations arise at several critical temperatures and applied potential differences. The curve for photoconductivity as a function of wavelength shows three clearly expressed maxima at energy levels of approximately 1.4, 1.02 and 0.75 ev. The first maximum is probably due to interband transitions, while the other two are apparently caused by oxygen impurities in the specimens. Current voltage curves show a clearly expressed region of negative resistance. Low-frequency photocurrent oscillations are always observed in this region. The frequency of these oscillations at a temperature of -90°C is 17 cps. A typical oscillogram of the oscillations is given. When the temperature is reduced to -100°C , the oscillations become strongly

Cerd 1/2

L 9577-66

ACC NR: AP5027445

asymmetric and the frequency drops to 0.2-5 cps. The frequency of the oscillations increases with the wavelength of the incident light in the negative resistance region. The threshold voltage for the oscillations increases with temperature. These oscillations are apparently due to two types of centers with different relaxation times. Orig. art. has: 2 figures.

TOPIC TAGS: trigger circuit, automatic regulation

ABSTRACT: This Author Certificate presents a device for the automatic repetitive triggering of a self-triggering inverter which contains a capacitor and a controlled rectifier. The device is used for triggering the inverter and is designed to increase its reliability and response time. A capacitor, the output of a rectifying bridge which is fed from a separate winding of the grid transformer of the inverter, a regulated discharge resistance, and a circuit containing the source of the negative grid bias connected in series to a thyratron (see Fig. 1), are connected in parallel to the grid-cathode circuit of the triggering rectifier.

ABSTRACT: This Author Certificate presents a parallel inverter of controllable ion rectifiers. It contains a switching capacitor, saturable reactors connected in series in the rectifier anode circuits, and damping RC circuits. To reduce the probability of reverse triggering and to improve the reliability of operation, the switching capacitor is connected between the saturable reactors. The reactors are of the autotransformer type to whose taps the load is connected (see Fig. 1).

TITLE: A single-phase relaxation bridge inverter. Class 21, No. 179833 [announced by Ural Department, Scientific Research Institute of Railway Transportation (Ural'skoye otdeleniye nauchno-issledovatel'skogo instituta zheleznodorozhного transporta)]
Vsego 2 stran

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 6, 1966, 46-47

TOPIC TAGS: electric inverter, electric filter, electronic rectifier

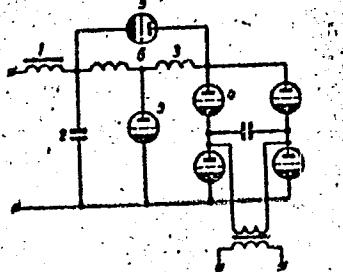

ABSTRACT: This Author's Certificate introduces a single-phase relaxation bridge inverter with an inductance-capacitance filter at the input. The inductive reactance in the tank circuit is connected between a group of rectifiers and the filter capacitor. The filter capacitor and the inductance in the tank circuit are used for switching off the inverter in emergency conditions. The emergency disconnection speed is increased and the fixed power of the disconnection equipment is reduced by using two additional controlled rectifiers. The inductive reactance in the tank circuit is divided into two sections and one of the controlled rectifiers is connected in parallel with this reactance while the other rectifier is connected in parallel with the filter capacitor and one section of the reactance.

Title: Use of Sand with Clayey Inclusions in the Production of Silicate
Bricks

Original
Publication: Stroit. materialy, izdeliya i konstruktsii, 1956, No 5, 26-27

Abstract: There is proposed the following technology of utilization of sand
with clayey inclusions: from clay, separated from the sand by means
of a vibratory screen of special design, is produced, in a continuous
operation propeller mixer, a clay suspension which is then uniformly
combined, in an identical mixer, with lime and sand.

AUTHOR: Tret'yak, V. G.

TITLE: On one approach to the problem of the shear-produced buckling in camber of an infinite strip

SOURCE: IVUZ. Aviatsionnaya tekhnika, no. 3, 1963, 51-53

TOPIC TAGS: shell, thin shell, strip, infinite strip, thin strip, buckling, buckling in camber, camber, buckling due to shear, shear buckling, buckling in shear, approximate method, variational method

ABSTRACT: This theoretical paper attempts a generalization of Prof. S. N. Kan's calculation method for shells to the calculation of the formation of a transverse camber (buckling) in an infinite strip. The problem is examined in linearized form. The material of the strip is assumed to be ideally elastic and homogeneous. The usual hypotheses of the theory of thin plates are made. The position of the plate in space is stated in terms of the Cartesian coordinates x , y , and z . A displacement of the points of the middle surface of the plate in the direction of the z axis is designated w . The dimensions of a plate of constant thickness δ are shown in Fig. 1 (Encl.). The long sides of the infinite strip are assumed to be freely supported.

Card 1/4

ACCESSION NR: AP3007041

The formation of waves with inclined nodal lines is taken from experimental data reported by S. P. Timoshenko. The curved surface is described by Eq. (1) which, by means of the variational Euler equation, is employed to develop a system of homogeneous differential equations with constant coefficients

$$\frac{d^4\Psi_1(x)}{dx^4} - 2\left(\frac{\pi}{b}\right)^2 \frac{d^3\Psi_1(x)}{dx^3} + \left(\frac{\pi}{b}\right)^4 \Psi_1(x) - \frac{16}{3} \cdot \frac{\tau_{cr}^3}{Db} \cdot \frac{d\Psi_2(x)}{dx} = 0;$$

$$\frac{d^4\Psi_2(x)}{dx^4} - 2\left(\frac{2\pi}{b}\right)^2 \cdot \frac{d^3\Psi_2(x)}{dx^3} + \left(\frac{2\pi}{b}\right)^4 \Psi_2(x) + \frac{16}{3} \cdot \frac{\tau_{cr}^3}{Db} \cdot \frac{d\Psi_1(x)}{dx} = 0,$$

from which a characteristic equation is obtained for plates with any desired length/width ratio. A solution is sought for the critical stress that leads to a buckling instability, and an expression is obtained therefor:

$$\tau_{cr} = \pm h \sqrt{\frac{\pi^2 E}{12(1-\mu^2) \left(\frac{b}{l}\right)^2}}, \quad (5)$$

where $k = 5.37$. The exact solution of the problem for an infinitely long strip with

Card 2/4

ACCESSION NR: AP3007041

freely supported edges (Timoshenko) yields $k = 5.35$. The error of the author's solution amounts to 0.37% (the error incurred in the approximate solution provided by Timoshenko amounts to 6.5%). Thus, the use of the variational method affords a substantially accurate approximate solution, provided that the boundary conditions of the flexure functions in the direction of the y-axis are satisfied. The method set forth here can be employed for plates with other edge-support conditions and can also be used in the calculation of a cylindrical shell for buckling resulting from the action of torsional moments applied at the faces. Orig. art. has 1 figure and 5 numbered equations.

TITLE: Natural frequencies of orthotropic plates

SOURCE: Prikladnaya mekhanika, v. 2, no. 9, 1966, 44-52

TOPIC TAGS: orthotropic plate, natural frequency, natural plate frequency, orthotropic plate frequency, plate vibration, orthotropic plate vibration, vibration mode, plate vibration mode, ORTHOTROPIC SHELL, VIBRATION ANALYSIS

ABSTRACT: The effect of boundary conditions on the natural frequency of orthotropic plates is investigated. It is proposed that the modes of vibration and frequencies of arbitrarily supported rectangular plates be determined by means of variational methods using successive approximation techniques and determining the roots of a transcendental equation (to the solution of which the problem is reduced) on electronic digital computers. The vibration of rectangular plates with the long sides simply supported and the short ones having a different type of support is analyzed first by solving the known differential equation for the motion of a vibrating plate. A system of algebraic homogeneous equations is obtained for determining the constants of integration from the boundary conditions. By equating its determinant to zero (which is

Card 1/2

ACC NR: AP6032391

a condition for existence of natural vibrations), a transcendental equation is obtained from whose roots the rigidity characteristics of the plate are established as well as their relationships with the plate dimensions and natural frequency ω , for which an exact expression is derived. The determination of ω in practice for a given fundamental pitch is outlined; methods for obtaining the transcendental equations for rectangular plates with simply supported long sides, and clamped, and simply supported short sides are discussed; the known formula for ω in these cases (derived by S. G. Lekhnitskiy) is obtained as a proof of the correctness of the proposed method. The determination of natural frequencies of plates with boundary conditions different from those discussed above involves considerable difficulty. A more general method for solving this problem by an energy method through minimization of a work functional, which accounts for bending and torsion, is proposed. The course of solution is analogous to that used in solving the differential equation of motion; a transcendental equation, rigidity characteristics, and an expression for the natural frequency ω of the plate are obtained, and a table for calculating the necessary coefficients for determining ω for plates with various support conditions is given. A sample determination of the fundamental pitch of natural vibration of an orthotropic rectangular plate with mixed boundary conditions, for which a transcendental equation was established, is prosecuted. The method proposed here can be used to solve the stability problems of rectangular plates. Orig. art. has: 3 figures, 3 tables, and 44 formulas.

Title : Carpathian Beech Groves and Their Reforestation

Orig Pub: Nauchn. tr. L'vovsk. lesotekhn. in-t, 1957, 3, 173-193

Abstract: Several ecologically based types are found in Carpathian beech groves. A description of experimental areas, established in these forest types, is given. Temporary plantings from beech groves of D2 type to those of C2 are particularly rich and variable according to the composition and growth of oaks and beeches. Height limits of various planting types

Card 1/2

USSR / Forestry. Biology and Typology of the Forest. K-1

Abs Jour: Ref Zhur-Biol., No 13, 1953, 58363

vary in accordance with exposure and steepness of slopes and the processes of soil formation. The great soil-conserving role and the high qualitative and quantitative yield of the rock-oak growing in groves of the types C₂, C₁, B₂, B₁ are notices. All types of forest areas composed of trans-Carpathian beech groves regenerate satisfactorily within the limits of 62-165 thousand young growths on 1 hectare. Different forestry management measures are recommended for an increased yield of Trans-Carpathian beech groves. Bibl. 19 titles. -- V. V. Protopopov

APPROVED FOR RELEASE: 03/20/2001

CIA-RDP86-00513R001756530004-0"

TRET'YAKOV, A.F.

TRET'YAKOV, A.F.

Treatment of radiculoneuritis with so-called radioactive bandage;
radioactive isotopes of thorium B, C, C', and C'', Zhur.nevr. i
psikh. 55 no.9:689-694 '55.
(MLRA 8:11)

1. Iz Tsentral'nogo instituta kurortologii (dir.kandidat meditsinskikh
nauk G.N.Pospelova), Moskva.
(THORIUM, radioactive
ther. of radiculoneuritis, plaster technic)
(NEURITIS, therapy,
radiotherium, plaster technic)

TRET'YAKOV, A. F. Cand Med Sci -- (diss) "A New Form of Alpha-
Therapy - Radioactive Bandages - and Their ^{use in} ~~application for~~
Treating ~~RAD~~ Radiculoneuritis Patients." Mos, 1957. 16 pp 20 cm.
(Min of Health RSFSR, Central Inst for the Science of Health Resorts),
250 copies (KL, 27-57, 110)

- 80 -
