AUTHOR: Ujec, Josef

TITLE: New methods of power generation and conversion

PERIODICAL: Věstník Československé akademie věd, no. 3, 1961, 377-382

TEXT: The Československá akademie věd, Laboratoř energetiky a Sekretariát státního plánu výzkumu (Power Laboratory and Secretariate of the State Research Plan, Czechoslovak Academy of Sciences), together with the Státní výbor pro rozvoj techniky (State Committee for Technical Development) and ministerstvo paliv a energetiky (Ministry of Fuels and Power) arranged a scientific working conference on Nové způsoby získávání a přeměny energie (New methods of power generation and conversion). The conference was convened at the Dům vědeckých pracovníků J. E. Purkyně (J. E. Purkyně House of Scientific Workers) in Liblice on March 21-23, 1961. The purpose of the conference was to evaluate the potentialities of some new methods of direct conversion to electricity of heat and chemical energy, and of some new primary sources of power for the future expansion of the Czechoslovak

New methods of power generation ...

economy. The conference was attended by more than 80 specialists from the fields of theoretical and applied research. Introductory reports were delivered by: Jan Smetana, Academician, Chairman of the technická sekce ČSAV (Technical Section, Czechoslovak AS); Jan Osolobě, Engineer, Corresponding member, Czechoslovak AS; Rudolf Kubinec, Engineer, Director of the Výzkumný energetický ústav (Power Research Institute) in behalf of the Ministry of Fuels and Power; and J. Holubec, Engineer, in behalf of the odbor paliv a energetiky ÚV KSČ (Fuels and Power Section, ÚV KSČ). A total of nine papers was presented dealing with the following specific problems: (1) Magneto-hydrodynamic method of converting heat to electricity; (2) Thermionic emission method; (3) Thermoelectric method; (4) Fuel cells; (5) Utilization of some unconventional sources of energy, such as controlled thermonuclear fusion and solar energy. The results and conclusions of the conference were briefly summarized by J. Vyskoč, Engineer, and 1st Vice-Chairman of the State Committee for Technical Development. The conference arrived at the conclusion that Czechoslovak research due to its limited possibilities and resources, limit itself to the fields of pure science and basic research in

Card 2/3

close cooperation with the USSR and other Soviet-bloc countries. In this respect the conference made the following recommendations: (1) To include into the research plan the study of direct conversion of heat to electricity by the magnetohydrodynamic method; (2) To intensify theoretical and experimental research into high-temperature plasma; (3) To study new approaches towards direct conversion of solar energy for low-power applications; (4) To conduct research on various problems associated with the new methods of energy generation and conversion, such as achievement of high temperatures by combustion of fossil and chemical fuels; thermophysical and chemical properties of high-temperature environs; refractory materials for temperatures above 3,000°C; new semiconductors and transistors with specific properties; ionization of gases at high temperatures; and problems of flow; (5) To establish special scientific-research centers for study of the above problems; (6) To arrange for a broader conference of experts from the USSR and other Soviet-bloc countries in the second half of 1961 which should discuss international cooperation in the solution of the above scientific-research problems. ✓

"Results of Treating Trichomoniasis with Flagyl."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 27, 1 Jul 63, pp 989-991

Abstract: [Authors' English summary] General and local treatment with Flagyl (8823 R.P. preparato Specia) was administered to 62 women suffering from trichomoniasis both generally and locally, and to 54 of their mates generally. Good results were obtained for 57 (92 per cent) of the women. In the five cases with recurrence, contact reinfection was established. Authors consider R.P. preparato 8823 (Flagyl) a most effective drug in the treatment of trichomoniasis. All four (4) references are to French sources.

Title : Clinical Experiment in the Use of Sananycin in Advanced Hodgkin's Disease.

Orig Pub : Bratisl. lekar. listy, 1957, 37, No 1, 26-29.

Abstract : This is a communication on the use of sananycin in 15 cases of advanced Hodgkin's disease in courses between 100 and 200 gamma given I.V. twice a day, the total dose per course of treatment being 10-15 mg. In the majority of the patients there were side effects, such as ulcerative stomatitis, glossitis, etc. which were explained by the deficiency in group B vitamins. There was improvement in 9 patients lasting from 5-10 weeks. A transient effect was noticed in 10 cases, a prolonged remission in one case of combined treatment, and there was no effect in one case. The authors recommend that sananycin be used in generalized forms of Hodgkin's disease (with depressed functions of the bone marrow) which are refractory to other forms of therapy.

prior to this. Death occurred in only two patients after a brief improvement. In six women, amenorrhea was observed. The dosage of myleran is determined according to the tolerance and effect of therapy. The customary 24-hour dose of 0.06 milligrams per kilogram may be used only at the beginning of treatment. It has been noted that the mechanism of action of myleran is still unclear. The authors recommend the combined therapy using myleran and X-irradiation of the area of the spleen in the presence of splenomegaly, and with a predominance of myeloblasts in the blood, myleran treatment in combination with 6-mercaptopurine. -- A.N. Ivanov

Title : The Mechanism of Action of Myleran

Abs Jour : Neoplasia, 1957, 4, No 4, 340-344

Abstract : A study was made of the excretion of uric acid in patients with chronic myelogenous leukemia treated with myleran (I). The intensity of uric acid excretion was evaluated by the quantity of it contained in a 24-hour urine sample. In some patients in the interval between the 10th and 20th day after beginning the injection of I a reduction occurred in the leucocyte count in the blood accompanied by a decrease in the urine uric acid. For other patients a slow reduction in the leucocyte count, the absence of any effect on the spleen and a

slight decrease in the level of excreted uric acid were characteristic. The authors believe that I exerts an inhibiting effect only on the division of leukemic cells. The mechanism of action of I is different from that of the chloralkylamines, triethylene melamine and X-rays.

Prague, Casopis Lekarů Ceskych, Vol 105, No 39, 23 Sep 66, pp 1068 - 1071

Abstract [Authors' English summary modified]: A mixture of cells of Yoshida's tumor both of the type resistant to and sensitive to alkylated cytostatics was investigated. Mixtures of the cells were prepared with ratios of the sensitive to resistant of 1:1 to 8 : 1. The suppression of the sensitive line by the resistant line does not seem probable. 3 Tables, no references.

Title : Determination of Uranium in the Ash of Domestic Coal. II.
Determination of Uranium in Coal Ash with Morin.

Orig Pub: Magyar tud. akad. Kem. tud. oszt. kozl., 1956, 8, No 1, 47-51

Abstract: The previously developed method of determining U with morin (RZhKhim, 1956, 43528), has been applied in the analysis of coal ash. Fe(3+) (in the presence of complexon III), and also small amounts of V and Mo do not interfere. In the analysis the sample is treated with nitric acid and extracted with ether. The ether is driven off and in the aqueous solution U is determined photo-metrically by means of morin. The results obtained are in agreement with results of radiometric determinations. 30-250 μg U are determined with a U content of 0.0003% in the ash.
