TITLE: Thermionic generators for nuclear power plants

SOURCE: Przegląd elektrotechniczny, no. 5, 1966, 188-192

TOPIC TAGS: nuclear power plant, thermionics, thermionic energy conversion, power generating station, nuclear power

ABSTRACT: The article discusses the principles underlying the application of thermionic generators in the conversion of heat generated by nuclear reactors to electrical energy, the fundamental problems associated with the use of such converters in industrial installations and the main trends of research in the field, and analyzes the possibility of using thermionic conversion with the various types of reactors. The study was undertaken because there is much to suggest that there is great advantage to be found in the thermionic conversion of heat to electric energy. Whereas the present article concentrates first of all on fundamental problems and the suitability of structural materials for long term operation under heavy duty conditions, the author indicates that a further study will turn attention to certain aspects of system design.

AUTHOR: Urbaniec, Martin, Engineer

TITLE: Polish Capacitors for Improving the Power Factor.

PERIODICAL: Wiadomości Elektrotechniczne, 1960, Nr 1, pp 15 - 16

ABSTRACT: The article gives brief information on the types of capacitors for improving the power factor, produced by the Zakłady Wytwórcze Podzespołów Telekomunikacyjnych (Telecommunication Parts and Accessories Producing Plant) "Telpod", in Cracow, 4 Lipowa Street. For inside use the KS1A type is manufactured for the following voltages: 220, 380, 500, 3000, 3,030, 3,640, 6,000, and 6,060 v a-c, 50 cps. At the end of this year a 9,090 v type will be added. There are several power values for each voltage (either one or three phases). Up to 500 v can be supplied with or without enclosures. For mounting out of doors the KEZ type is manufactured. Among these, KEZ-E type has one pole connected to the outside, the other one isolated, the KEZ-I type has both poles isolated. Capacitors for other

Card 1/2

Polish Capacitors for Improving the Power Factor

POL/24-60-1-7/20

than the indicated voltages can also be produced according to the customer's specifications. The KSTA type accords with the Branch Standard RN-58/MPC-14001, while the KEZ type corresponds to the Technical Standard WT-58/E-16103.

There are 8 diagrams.

ASSOCIATION: "Telpod", Cracow.

Title : The Infrared Absorption Spectra of Extracted Coals

Orig Pub : Bull. Acad. polon. sci. Ser. sci. chim., geol. et
geogr., 1959, 7, No 4, 207-214

Abstract : In the region $750 - 4500 \text{ cm}^{-1}$, the authors have investigated the infrared absorption spectra of several natural coals with different degree of carbonization: brown coal (I), hard coal (III), and anthracite (III) after extraction with a mixture of benzene (70%) with ethanol (30%). It is noted that as the increase of the carbon contents in the specimens of the coal increases, the overall background of their spectral absorption increases, particularly in the short wave region, this being explained

Card 1/2

- 165 -

POLAND/Optics - Spectroscopy.

K

Abs Jour : Ref Zhur Fizika, No 4, 1960, 9953

by the graphitization of the structure of the coal. In spectra of I, an intense absorption band near approximately 3350 cm^{-1} is observed, corresponding to the vibrations of the hydroxyl groups. Its intensity decreases with carbonization of the coal. In addition, bands are observed in the spectra near 1690 cm^{-1} (carbonyl group of aromatic ketones) a group of bands in the region of $1150 - 1280\text{ cm}^{-1}$ (valent vibrations of the C -- O bonds in phenols and ethers and deformation vibrations of the OH groups) and many absorption bands of silicate impurities. The intensities of the bands of absorption of organic impurities decreases upon going from spectra of I to the spectra of II and III. Bibliography, 11 titles. -- A.N. Sidorov

Chief Ed.), Adam Bielecki, Stanisław Hartman, Jan Mikusiński, Roman Sikorski,
Marceli Stark, Hanna Szmyszkowicz, Krzysztof Tatarkiewicz, and Włodzimierz
Wrona.

PURPOSE: This book is intended for mathematicians.

COVERAGE: The book consists of a collection of articles on analysis, series,
and function theory. Among the topics discussed are: the solution of
Diophantine equations, set translation, power series, measure by a function,
operational calculus, approximation of a function, and functional spaces.
References and summaries in English and Russian are found at the end of most
of the articles. No personalities are mentioned.

URBANIK R

URBANIK, K.

Urbanik, K. Stochastic processes whose sample functions are distributions. I. (1956), 146-149 (Russian; English summary) 1-F, W

(1956), 146-149 (Russian; English summary).
 This paper gives definitions that permit a rigorous discussion of certain stochastic processes used in physics, such as the Brownian motion. A sequence of sample functions of stochastic processes $\{f_n(t)\}$ is called fundamental if there is a convergent sequence of processes $\{F_n\}$ and integer $k \geq 0$ such that $F_n^{(k)}(t) \rightarrow F^{(k)}(t)$ w. p. 1. Two sequences $\{f_n\}$ and $\{g_n\}$ are equivalent if, w. p. 1, $f_n = F_n^{(k)}$, $g_n = G_n^{(k)}$, $F_n \rightarrow F$, $G_n \rightarrow G$. A fundamental sequence determines a generalized stochastic process Φ ; $f_n \rightarrow \Phi$ being the same for all sequences equivalent to $\{f_n\}$. The f_n sample functions define, w. p. 1, a distribution in the sense of Mikusiński, Bull. Acad. Polon. Sci. Cl. III 3 (1955), 589-591, MK 17, 594, for connection with the "distributions" of I. Schwartz, see J. K. Heywood, Nederl. Akad. Wetensch. Proc. Ser. A 58 (1955), 603-604, MK 17, 594. It is always possible to determine a given Φ by means of a sequence $\{h_n\}$ whose sample functions are infinitely often differentiable w. p. 1, and $d\Phi/dt$ is defined as $\{h_n\}$. $\Phi = \{f_n\}$ has independent (increments, values) if for each $\tau > 0$ and sufficiently

1/2

Urbanik, K.

large n , I_n has independent (increments, values) for (intervals, points) whose distance is $\geq \epsilon$. Theorem: A generalized process has independent values if and only if it is a first order derivative of some generalized process with independent increments. Also treated are correlation functions, spectral representations, and an ergodic theorem for generalized second-order stationary processes. Proofs are not included.

TITLE: Solution of an Extremal Problem. (Resheniye odnoy ekstremal'noy zadachi).

PERIODICAL: Teoriya Veroyatnostey i Yeye Primeneniya, 1957, Vol.II, Nr.3. pp.375-377. (USSR)

ABSTRACT: Let N be a set of pairs of integers $\langle i, j \rangle$ ($i, j = 1, 2, \dots, h$), and M a non-empty subset of N . We shall denote by \mathcal{P}_M the class of all systems $P = \{p_{ij}\}$ ($\langle i, j \rangle \in N$) satisfying the following conditions:

$$p_{ij} \geq 0 \text{ for } \langle i, j \rangle \in N, p_{ij} = 0 \text{ for } \langle i, j \rangle \in N \setminus M,$$

$$\sum_{\langle i, j \rangle \in M} p_{ij} = 1.$$

Card 1/3

PURPOSE: This book is intended for mathematicians and physicists.

COVERAGE: The book is Volume IV of the Transactions of the Third All-Union Mathematical Conference, held in June and July 1956. The book is divided into two main parts. The first part contains summaries of the papers presented by Soviet scientists at the Conference that were not included in the first two volumes. The second part contains the text of reports submitted to the editor by non-Soviet scientists. In those cases when the non-Soviet scientist did not submit a copy of his paper to the editor, the title of the paper is cited and, if the paper was printed in a previous volume, reference is made to the appropriate volume. The papers, both Soviet and non-Soviet, cover various topics in number theory, algebra, analysis, probability, equations, functions, combinatorics, functional analysis, probability theory, computational mathematics, problems of mechanics and physics, computational mathematics, mathematical logic and the foundations of mathematics, and the history of mathematics.

AUTHORS: Ingarden, Roman S., and Urbanik, Kazimierz

TITLE: quantum informational thermodynamics

PERIODICAL: Acta Physica Polonica, v. 21, no. 3, 1962, 281 - 304

TEXT: It is shown that a kind of thermodynamics, designated by the authors as "informational thermodynamics" or "A-thermodynamics", can be constructed on the basis of the "information" concept. Informational thermodynamics chiefly operates with the two concepts "information" and "expectation", both of which are functionals of the probability distribution. Informational thermodynamics is more abstract than the traditional one, which the authors call "probabilistic thermodynamics". In contrast to Jaynes (Ref., see below), who only uses operators with a limited number of proper values, also such operators with an unlimited number of proper values are discussed here, as belong to a specific class of so-called "thermodynamically regular" operators. It is shown that all other possible operators are unsuited for thermodynamic considerations. A Hermitian operator A , representing an arbitrary physical quantity, is thermodynamically regular, if its spectrum

is discrete, and if there exists a real constant c so that

$\sum_{k=1}^{\infty} e^{c\lambda_k} < \infty$, where $\lambda_1, \lambda_2, \dots$ are eigenvalues of A . Boltzmann's "principle

of maximum probability" is replaced by that of "maximum information".

A -entropy and A -temperature are defined. They become reduced to ordinary entropy and temperature if A is the operator H of total energy. For some operators A this approach leads to the new concept of a maximum (finite) A -temperature, where the A -temperature is variable within a limited range only. A few cases calculated as examples, namely, a spatially fixed fermion with $1/2$, a spatially fixed boson with spin 1 , the linear harmonic oscillator, a free particle in a box, and the square of angular momentum show to what logical clearness informational thermodynamics is able to solve such problems. The three principal laws of A -thermodynamics are constructed and the assumptions regarding operator A are proved. The concepts "mixed state" and "statistical operator" are not used as they presuppose a probability distribution which mostly has to be taken from outside (quantum ergodic hypothesis). Since distribution probabilities are no longer of interest, these difficulties are eliminated in informational thermodynamics.

Operators with finite temperature range have hitherto been unknown in physics. It is yet possible that such be encountered some day in plasma physics or astrophysics. The authors believe that a new virgin field of thermodynamics has been laid open to research. There are 11 references: 1 Soviet-bloc and 10 non-Soviet-bloc. The four most important references to English-language publications read as follows: Jaynes, E. T., Phys. Rev., 106, 602 (1957), Phys. Rev., 108, 171 (1957); Landau, L., and Lifshits, E., Statistical Physics, Pergamon Press, London, 1958; Quantum Mechanics, Pergamon Press, London, 1959; Tolman, R. C., The principles of Statistical Mechanics, Oxford University Press, London, 1938; Schrödinger, E., Statistical Thermodynamics, Cambridge University Press, Cambridge, 1952.

"Acute Haemoperitoneum Due to Rupture of a Hepatic Tumor"

Zagreb, Radovi medicinskog fakulteta u Zagrebu, Vol 13, No 2, 1965,
pp 167-173

Abstract [Authors' English summary]: Three cases of acute spontane-
ous haemoperitoneum with fatal termination are reported. The first
case was an 18-month-old child with a hepatoblastoma of the liver,
the second case was rupture of a primary carcinoma of the liver in
a 56-year-old man, and the third case was a 34-year-old woman with
rupture of a hepatic metastasis of primary solid carcinoma of the
breast. The cause of the ruptures remained unexplained. The authors
emphasize the significance of rupture of a primary or metastatic
tumor of the liver in the differential diagnosis of an acute haemo-
peritoneum, especially since there have been cases described where
intervention saved the patient's life. Pictures. 1 Yugoslav and
11 Western references. Manuscript received 12 Oct 1965.

"The Effect of Cold and of Cigarette Smoke on the Elimination of Dust from the Lungs."

Prague, Pracovni Lekarstvi, Vol 18, No 6 - 7, Aug 66, pp 263-264

Abstract /Authors' English summary modified_: Experiments on rats showed that both the stimuli investigated inhibit pulmonary clearance. The mechanism of the two stimuli is different in each case. Cigarette smoke inhibits ciliary activity; the cold induces a stress on the whole organism. 3 Tables, 1 Western, 5 Czech references. (Manuscript received 1 Dec 65).
