"Examination of Infants Fed by Various Means"

Budapest, Orvosi Hetilap, Vol 104, No 19, 12 May 1963, pp. 883-885.

Abstract: The various methods of infant-feeding were discussed on the basis of the author's personal familiarity with 730 cases. The evaluation was based on weight development, morbidity, progress and course of various diseases, and incidence of rachitis. By all methods of evaluation the superiority of breast-feeding over all other methods was proven by overwhelming evidence. Eighteen references, including 6 Hungarian, 2 German, and 5 Western.

"Current Problems of Hypogalactia."

Budapest, Orvosi Hetilap, Vol 104, No 33, 18 Aug 1963, pages 1543-1547.

Abstract: [Authors' Hungarian summary modified] The causes of hypogalactia and overly short duration of breast feeding can be manifold. In most of the cases, several factors influence the development of hypogalactia. Based on observations and statistical data presented, and on a critical evaluation of the previously suspected factors, the authors advocate the view that hypogalactia can be prevented or corrected. 28 Hungarian, 21 Western references.

s/0031/64/000/008/0072/0076

AUTHOR: Vel'khover, Yo. S.

TITLE: Changes in the bioelectric activity of the cerebrum in neurasthenic patients, induced by acupuncture therapy

SOURCE: AN KazSSR. Vestnik, no. 8, 1964, 72-76

TOPIC TAGS: electroencephalogram, neurasthenia, acupuncture, alpha rhythm/  
Kaiser encephalograph

ABSTRACT: Work was conducted on 144 patients (60 were afflicted with the hyposthenic form of neurasthenia, 76 with its transitional type, and 8 with its hypersthenic form). All patients received the standard complex therapeutic treatment, while half of them were also subjected to 10-12 courses of acupuncture. The cerebral bioactivity was recorded by means of Kaiser's electroencephalograph, using photostimulation as the functional test. Pathological deviations in the electroencephalogram (EEG) were detected in 43% of the cases before the treatment was begun. The standard treatment alone caused an average increase in the alpha-rhythm index from the original 36.5% to 41%. The acupuncture therapy brought about a normalization of some parameters of the electroencephalogram. Basic EEG changes

Card 1/2

ACCESSION NR: APL045063

were observed only in individual cases. A beneficial effect of acupuncture therapy was observed in an improvement of the alpha-rhythm and in shortening the aftereffect period. This is interpreted as an indication of an improved performance capacity of the cerebral cortex and a normalization of cortical-subcortical relationship. Approximately 20 works are cited in the text, giving only the author's name and the date of publication. Orig. art. has: 1 table and 2 graphs.

"The Role of Psychic Factors in the Development of Weight at Birth."

Budapest, Orvosi Hetilap, Vol 107, No 12, 20 Mar 66, pages 544-547.

Abstract: [Author's Hungarian summary] By the continuous observation of 1227 pregnant women by the author himself, followed by regular examination of the infants every 3 months until 1 year of age, an attempt was made to find any possible correlations between events during pregnancy and the birth weight as well as the extrauterine development of the infants after birth. In the present article, the apparently positive results of a study of the correlations between the psychic condition of the women during pregnancy and the birth weight are reported and concrete data are furnished on this correlation. 18 Eastern European, 12 Western references.

"Report on a Case of Masochism"

Prague, Ceskoslovenska Psychiatrie, Vol LIX, No 2, April 63, pp 99-103.

Abstract [Authors' English summary]: The case is described of a twenty-one year old male masochist who was sexually stimulated by phantasies of being in the company of sadistic women torturing and humiliating him, giving him a dog collar and the like. He longed to become acquainted with a woman of a sadistic make-up. He often achieved sexual excitement by causing himself deliberately pain (cigarette burns, cuts with a cutting blade, sewed buttons to his face). His personality was psychopathic with hysteroid and schizoid features, his intellectual capacities were above average. Three references, [1/1] including 2 Czech.

ABSTRACT : The greatest successes in the development of peach cultivation in Bulgaria were obtained by Petrichkaya and Slivenskiya Okolias - the average yield is 20 tons/ha. frosts below 32° injure the fruit buds and the insufficiently mature shoots. Recommended for peach cultivation are regions with mild winters and very rare late spring frosts, and also regions with irrigation. It is recommended to transplant varieties with different periods of ripening (beginning with June and ending with October). Particular attention should be paid to the early-maturing

TITLE: Anastas'yevsk Crude Oil From Bed IV as a Raw Material for Low-Viscosity Oils

PERIODICAL: Khimiya i tekhnologiya topliv i masel, 1960, Nr 2, pp 1-6 (USSR)

ABSTRACT: Of the three oil-producing beds IV, V, VI of the Anastas'yevsk deposit, Krasnodar Region, only the first yields crude oil suitable for production of special oils. The bed is capable of supplying the Soviet economy with all the needed types of low solid point special oils. The solidification point of the crude oil is  $-60^{\circ}\text{C}$  and that of the machine distillate is  $-26^{\circ}\text{C}$ . Crude oils from the other two beds require desparaffinization if special oils are to be produced. According to the data of Yaroslavl and Gor'ki refineries, crude oil from bed IV contains 51.6% methane-naphthenes, 7.6% light-, 26.0% intermediate-, and
