TITLE: Unified transistorized regulating system for rapid dynamic processes—UNIDIN

SOURCE: Automatica si electronica, v. 9, no. 5, 1965, 221-228

TOPIC TAGS: automatic regulation, transistorized circuit

ABSTRACT: The authors summarize the design and operation of the UNIDIN transistorized automatic regulation system, built in Rumania since 1963-1964, and review the results of its use in various applications. They conclude that the principles underlying the design have proved to be the correct ones, and that its modular construction with standardized elements (printed circuit cards, etc.) offers many advantages from the point of view of construction, installation and operation. Orig. art. has: 5 figures and 1 table. [JPRS]

1672. THE HOMEOSTATIC REFLEX IN THE REGULATION OF THE INTRA-OCULAR PRESSURE - Weinstein P. Dept. of Ophthalmol., Med. Postgrad. Inst. of Szabolcs Utca, Budapest - AMER. J. OPHTHAL. 1959, 47/6 (871-874) Illus. 5

The intraocular pressure is stabilized by means of a homeostatic reflex which controls aqueous secretion and angle resistance. Aqueous secretion decreases when any autogenous or exogenous factor attempts to raise the ocular tension; conversely, any attempt to decrease the tension is followed by a rise in angle resistance. This homeostatic reflex is controlled by the sensitive nerve elements found in the trabecular meshwork of the angle, which send interceptive signals to the cortex, diencephalon, and the ciliary processes. When pathologic interference disturbs the normal functioning of the homeostatic reflex, glaucoma results.

Welding of Two Different Steels with Austenitic Electrodes.  
J. Weinzettl. (Svarovani, 1950, vol. 10, Apr., pp. 38-46).  
(In Czech). The problem of joining two different steels by  
welding with austenitic electrodes is discussed. The  
Maurer diagram and equations expressing the effect of the in-  
dividual alloying elements on the formation of austenite and  
ferrite the Schaeffler equation defining the boundaries, and  
the graphical solution in the case of multilayer welds are  
dealt with. These concepts are applied to steels and elect-  
rodes of Czech manufacture.

Title : Autoamtion Receiver of Fractions for Liquid Chromatography.

Orig Pub : Chem. listy, 1957, 51, No 5, 995-997.

Abstract : A description of a laboratory appliance for semi automatic and automatic separating of fractions at chromatography. The semi automatic appliance consists of a receiver, suspended to a beam and equilibrated for the required volume of the fraction. A Hg - contact of the signal installation is connected at the turn of the beam. The change of the receiver is effectuated manually. The automatic appliance consists of a rotating table with 32 receiving vessels. The change of receivers is effectuated with the aid of electromotor turning the table. The electromotor enters into action periodically with the aid of a special time relay.

"Urządzenia do wyłuskiwania włókna", Przegląd Papierniczy, No. 3, 1933,  
pp. 07-11, 14 figs.

The wire sections of Polish and foreign made paper machines are discussed from the point of view of an efficient exchange of wires. This is of great importance in paper-making. Different methods of installing wires in paper machines are outlined. In choosing the construction of wire sections, the following are points to be considered: the difficulty of the exchanging operation; duration of the operation; risk of damaging specific elements of the wire section. The adverse influence of these factors depends upon the width of the machine and its productivity, the length of the wire, the kind of wire and the quality of the paper produced.

"Posterior Dislocation of the Shoulder."

Budapest, Magyar Traumatologia, Orthopaedia es Helyreallito Sebeszet, Vol IX, No 3, Jul 66, pages 192-196.

Abstract: [Authors' English summary modified] A review of literature data on posterior dislocation of the shoulder is followed by the description of two observed cases. Among cases of shoulder dislocation observed over a five year period, the incidence of posterior dislocation was 2.02 per cent. In contrast to literature data, the opinion is presented that posterior dislocation can be recognized by a thorough clinical (physical) examination. Exact radiological diagnosis can only be arrived at by means of bilateral radiograms. 3 Hungarian, 17 Western references.

"Epidemic Episodes of Febrile Catarrh of the Upper Respiratory Tract and Conjunctivitis Associated with Enteroviruses."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 5, 1963, pp 603-618.

Abstract [Authors' English summary modified]: Describes two foci with 100 % morbidity in a children's community (1 to 3 year olds). In one of the foci, ECHO virus type 7 was isolated from the pharynx and feces of 55% of the children. In the second focus Coxsackie A<sub>9</sub> virus alone or associated with ECHO<sub>9</sub> virus was isolated from the pharynx and feces of 61% of the children tested. The second epidemic focus was characterized by complete absence of nervous symptomatology, possibly because of interference between the two viruses at the level of the central nervous system. Thus a possible enteroviral etiology should be considered for non-bacterial epidemic respiratory infections even if associated with conjunctivitis.

Caused by Microsporidia.

Orig Pub: Vest. Ceskosl. spolec. zool., 1957, 21, No 1,  
65-82.

Abstract: There are described, in detail, new species of  
microsporidia, found in the gypsy and brown-  
tail moths in Czechoslovakia. *Nosema lyman-*  
*triae* sp. n. infests the fat body and spinning  
glands of the brown-tail moth caterpillars. *N.*  
*muscularis* sp. n., which infests only *Lymantri*  
*dispar*. *N. muscularis* sp. n., is encountered

Abs Jour: Ref Zhur-Biol., No 13, 1958, 59146.

Abstract: in the form of a mixed infection with *N. lycimantriae* in the gypsy moth caterpillars. The parasite manifests a specificity in the selection of the tissues: it affects the intestine musculature, then passes on to the trachea and Malpighian vessels. The infection is transmitted to *Nygmia phaeorrhoea* and *Hyphantria cunea*. *Tholophania similis* sp. n. is found in the brown-tail moth; it affects the caterpillar fat bodies; besides *Nygmia*, it affects *L. dispar*. Microsporidia, infecting the caterpillar fat bodies, causes a chronic disease, which last 30 days; for microsporidia of the intestinal variety, on the contrary, an acute course

TITLE: Synthesis of Some Highly Branched Paraffin Hydrocarbons

PERIODICAL: Izvestiya Akademii nauk SSSR. Otdeleniye khimicheskikh nauk,  
1959, Nr 8, pp 1425-1432 (USSR)

ABSTRACT: In the present paper the hydrogenation of tertiary alcohols and ditertiary glycols with two isopropyl or tertiary butyl groups at the carbon atom in the presence of molybdenum sulfide is carried out. By means of this hydrogenation hydrocarbons with an equal, or usually even lower, number of carbon atoms could be obtained. In the case of compounds with tertiary butyl radicals (one or two), these radicals split off in the dehydrogenation process while hydrocarbons were formed which contain 4 - 8 carbon atoms less than the initial products. Analogous alcohols and glycols with isopropyl groups remained stable during hydrogenation and hydrocarbons with the same carbon structure as the oxygen-containing initial products were formed. By means of hydrogenation a high yield of 2-methyl-3-isopropyloctane and 2,9-dimethyl-3,8-diisopropyldecane could be gained from the compounds of 2-methyl-3-isopropyloctanol and 2,9-dimethyl-3,8-diisopropyldecane diol-

Card 1/2

Synthesis of Some Highly Branched Paraffin Hydrocarbons SOV/62-59-8-14/42

3,8. The synthesis of the individual compounds and the hydrogenation reactions are described in the experimental part. A survey on the tests containing also the properties of the compounds is given in table 2. The individual substances were identified by means of infrared spectra and elementary analyses (Figs 1-3). The elementary analyses were carried out by T. Leki in the analytical laboratory of the Chair of Synthetic Motor Fuels of the Higher Education School of Chemical Technology in Prague. The infrared spectra were taken at the Chair of Special Analytical Methods (Professor F. Čuta ) under the supervision of Engineer L. Novotný and A. Kchutova whom the authors thank for their work. There are 3 figures, 2 tables, and 12 references, 5 of which are Soviet.
