Title : A New Application of Tallol.

Orig Pub : Przegl. papiern., 1958, 14. No 2, 58.

Abstract : Tallol consists of (in %): fatty acids (linoleic, linolenic, oleic) 34, rosin acids (abietic, dihydroabietic) 62. The tallol contains ~ 4.5% moisture and 0.2% ash; Its iodine number is 140 and the saponification number is 180. A possibility was established for using tallol in the production of tracing paper (for dissolving dyes and pigments) with an insignificant addition of stearin and in the manufacture of pencils (for graphite stick).

Microcoulometric reduction of gammexane. Wiktor  
Kemula and Andrzej Cisak (Univ. Warsaw), Roczniki  
Chem. 28, 215-21(1953)(English summary).--The no. of  
electron,  $n = 5.9 \pm 0.3$ , involved in the polarographic re-  
duction of gammexane was detd. by a microcoulometric  
method. Since no formation of  $\text{OH}^-$  ions was detected,  
the reduction  $\text{C}_6\text{H}_5\text{Cl}_6 + 7e \rightarrow \text{C}_6\text{H}_5 + 6\text{Cl}^-$  was thought  
to occur. M. Falk

EXCERPTA MEDICA Sec.6 Vol.11/3 Internal Med. Mar 57

1970. WIKTOR Z. III. Klin. Chor. Wewnętrz. A.M., Wrocław. "W sprawie remisji cukrzycy w czasie żółtaczki. Remission of diabetes during jaundice POL. ARCH. MED. WEWNĘT. 1956, 26/7 (1147-1152)  
Report of 4 cases of remission of diabetes in the course of jaundice. Two had infectious hepatitis; one of them ended with death due to acute, yellow atrophy of the liver. In spite of a severe, irreversible impairment of the liver with the picture of hepatic coma, there was no deterioration of diabetes; also no symptoms of diabetic acidosis were observed. The other 2 had mechanical jaundice - one case due to cholelithiasis, and the other to cancer of the pancreas. Independently of the origin of the jaundice, disappearance of diabetes symptoms was observed. The sugar level in the blood fell; also the amount of sugar excretion in the urine decreased. After the disappearance of jaundice, the diabetes aggravated. Although the mechanism of the observed remission of diabetes in the course of jaundice is not clear; the author - taking into account the remissions of various diseases at the time of jaundice - is apt to consider one common mechanism operating via the nervous system.

Title : On the Problem of Pathogenesis of Chloroma.

Orig Pub: Polski tygod. Lekar., 1957, 12, No 14, 518-521.

Abstract: A case of chloroma diagnosed in a patient 22 years old is described. For a period of 1½ years the disease followed the course of typical chronic myelosis. Within 3 weeks after a fresh (not preserved) blood transfusion, there appeared on the skin of the anterior chest wall and later on the forehead typical green infiltrations of the size of a cherry, typical of chloroma.

"Some Phenomena of Aging and Physical Work."

Warsaw-Krakow, Przeegląd Lekarski, Vol 19, Ser II, No 7, 31 Jul 63, pp 299-303

Abstract: [Author's English summary modified] The author, on the basis of the literature and his own work in gerontological studies of the circulatory and renal systems, and comparative studies of these systems in young and old miners, concludes that senility reduces the parenchyma and the various systemic functions. While excessive work increases hypoxia in the aged, physical activity not only prevents atrophy of the muscles, increases the blood supply, and maintains the efficiency of the entire organism, but also probably accelerates lipid metabolism and perhaps prevents atherosclerosis. If balance of work of aged is preserved, their efficiency until the age of 60 is rather good. 23 refs: 13 Polish, 7 German, 3 Western.

Wiland M. The Problem of Operation Measurements of Reactive Power and cos  $\phi$ .

„Zagadnienia pomiarów ruchomych mocy biernej i cos  $\phi$ ”. Przegląd Elektrotechniczny. No. 12, 1950, pp. 538.-547, 7 figs, 2 tabs.

The nature of the load in alternating current systems is usually determined by means of measuring the power factor as well as the reactive power and reactive volt-amperes-hours. Owing to the great variety of measuring instruments which may be used for this purpose, an analysis was carried out to determine the criteria to serve as a guide in selecting the measuring equipment. It has been proved that in the majority of cases the measurement of reactive power is more convenient than the measurement of the power factor and that, without reducing the accuracy, active power wattmeters, suitably converted, may be used instead of proper reactive power wattmeters. Watt-hour (energy) meters are, after similar conversion, also eminently suitable for measuring reactive energy (var-hours).

120. WILAND-ZERA A. 1. Klin. Chor. Dzieci A. M., Łódź. Migotanie przedsionków u dzieci z chorobą reumatyczną *Auricular fibrillation in children afflicted by rheumatic disease* *Pediat. pol.* 1957, 32/3 (251—263) Graphs 6 Illus. 2

Observations of 6 cases, their ages ranging from 10 to 14 yr. were divided in 2 groups. In the first group 3 cases were placed in whom the arterial fibrillation aggravated the already existing chronic circulatory failure. The passing of the sinus rhythm into complete arrhythmia did not produce any subjective complaints; venous pressure was raised, the blood sedimentation rate normal and in 2 cases it was connected with lung infarcts. In the second group complete arrhythmia signified a relapse of the rheumatic attack. The appearance of auricular fibrillation caused subjective complaints; this was connected with infection of the upper respiratory tract, raised temperature, accelerated BSR and slightly increased venous pressure. Auricular fibrillation in this group of cases led to cardiac insufficiency which was absent previously. The prognosis was always bad. In the treatment of the first group attention was centred first of all on the treatment of the heart failure and the removal of congestion; in the second group on the treatment of infection. (XVIII, 7)

"Circulatory Diseases in Youth as Seen in Clinical and Outpatient Cases."

Warsaw, Polski Tygodnik Lekarski, Vol 17, No 46, 12 Nov 1962; pp 1779-1782.

Abstract [English summary modified]: During the course of 20 months, 680 girls and 320 boys aged 5 to 20 were examined: EKG, complete physical and fluoroscopic examination. Of the 1000, 458 were found healthy; 250 pre-rheumatic fever, 40 acquired cardiac impairment, 52 congenital cardiac defects, 2 boys arterial hypertension, 194 other vascular diseases. Clinical courses, treatment and aequales are described and discussed; 1 table.

'Myocardial Infarction in a 19-Years-Old. Case Report'

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 7, 11 Feb 1963, pp 262-265.

Abstract: /Author's English summary modified/ Large myocardial infarction in a 19-years-old patient is reported. The results of clinical observations and of studies performed suggested atheromatic etiology. Reports of other authors on myocardial infarction of atheromatic origin in young people are referred to. The influence of sex, body structure, heredity, stress and addiction on the occurrence of myocardial infarction in young people is discussed. 1 table; 2 diagrams; 5 Eastern, 11 Western references.
