A.M., Łódź. * Ostra mikrozwalowa niewydolność wieńcowa z klinicznym i elektrokardiograficznym obrazem masywnego zawału mięśnia sercowego. Acute coronary failure with microinfarction - with clinical and electrocardiographic picture of massive myocardial infarction POL. ARCH. MED. WEWN. 1956, 26/6 (965-971) Graphs 1 Illus. 5

In a 68-year-old woman with hypertensive disease on the basis of the generally accepted clinical and electrocardiographic criteria 2 successive myocardial infarctions were diagnosed. In the course of the disease the ECG showed a short-lasting disappearance of the R deflection in lead CR₄. The patient died after 5 weeks' stay in hospital. The anatomopathological examination showed numerous scattered necrotic foci of microscopic size within the myocardium; massive infarction, however, was not found. Numerous microscopic necrotic foci, when summed up, may give a full clinical and electrocardiographical picture of infarction, in this woman - as in a few other cases described in the world literature - there appeared a transient QS syndrome. This shows that the appearance of QS deflection in precordial leads is not a certain proof of infarction, involving the whole thickness of the wall (electrical window), because necrosis cannot occur as a transient phenomenon. Obviously considerable damage to the muscle fibres without their necrosis may also be a cause of appearance of QS deflection in the electrocardiographic curve.

Winiarski, B. The Ward-Leonard Control System for Planing Machine Drives.

„Układy Leonarda do napędu strugarek podłużnych". (Prace Inst. Elektrot No. 2(5), Warszawa, 1953, PWT, 41 pp., 55 figs., 18 tabs.

The article deals with various systems for driving planing-machine work tables. Summary of test results with the Ward-Leonard control system as adapted to planing-machine drives made by three manufacturers. The author reviews, on the basis of results obtained and by diagrammatic and grapho-analytical methods, the transient states of the drive system during the reversal of the table motion. It is possible to prepare, by means of equations, the curves for various table feed and speed rates, as well as for the value of cutting forces. These curves make possible the compilation of nomograms to provide characteristics, as to the operation of planing machines. This will, in their turn, make it possible to determine the optimum working conditions of the drive system and facilitate the fixing of maximum table speeds and minimum feed rates at which this drive system can operate.

The importance of forces transmitted from busbars to the terminals and forces exerted on windings by the busbars is shown. Examples of damage produced by these forces on s.c. are given. The oscillograms and graphs of secondary s.c. current and s.c. primary voltage are shown. The need in manufacture of a routine test, with secondary open, of the insulation between transformer windings is stressed with a view to ensure dielectric strength under s.c. conditions.

TITLE: Use of the Hall effect in the control of pendulum regulated, high precision primary clocks

SOURCE: Pomiar, automatyka, konstola, no. 8-9, 1966, 393-393

TOPIC TAGS: ~~precision~~ clock, pendulum regulated clock, halotron converter, pendulum, ~~system~~, Hall effect

ABSTRACT: The article considers in a brief and general manner certain of the advantages that may accrue from the use of the Hall effect for the compensation and neutralization of mechanical movements and related energy displacements in high-precision primary timing devices employing pendulum-type regulating elements. It is assumed that the effect of possible temperature and pressure changes has been eliminated and that the impulse maintaining the pendulum in motion is constant. Having demonstrated that the fundamental influence on the constancy of a pendulum's period is exercised by the constancy of the resistances to its movement and that the amplitude of a pendulum is in effect a function of its damping, the author provides a working diagram and description of a device, incorporating the Hall effect, in which

UDC: 538.632:681.116

Card 1/2

ACC NR: AP6034962

the pendulum is loaded only with the energy necessary for its free movement in a definite medium, with proper compensation for deflection hysteresis. Use of the Hall effect in such a device makes it possible, without contacts or feedback, to record the period of the pendulum, to transmit these processes to time-summing and -storage systems, and to control pendulum drive mechanisms. Attention is also called to the advantages to be gained from the use of halotron converters in the measurement of pendulum period amplitude. Orig. art. has: 1 figure.

 ABS. JOUR. : RZKhim.; No. 20 1959, No. 72144
 AUTHOR : Potocki, A.; Winiecki, S.
 INST. :
 TITLE : Latex-Cement Mixes as Shipdeck Flooring

ORIG. PUB. : Budown. okret., 1959, 4, No 1, 9-11

ABSTRACT : Latex-cement mixes for coating of decks were made with portland cement "350". The coating was applied over a steel foundation in a layer 10 mm thick. Hardening of the mix required 1-3 days depending on temperature. Specific gravity of the coating was 1.43-1.52 g/cm³, but when applied in a thin layer it weighed less than wooden flooring. The disadvantages of the coatings are their relatively low resistance to attrition and compression, and low stability to the action of oil. -- B. Levman. .

TITLE: Stability of vulcanized rubbers in liquid fuels containing aromatic compounds

SOURCE: Danzig. Politechnika. Zeszyty naukowe., no. 58, 1965. Chemia, no. 8, 145-161

TOPIC TAGS: nitrile rubber, acrylonitrile, polymer, polymer cross linking, liquid fuel, vulcanized rubber, aromatic compound, polysulfide polymer, polysulfide rubber

ABSTRACT: The authors investigated the effect of swelling-causing aromatic compounds in liquids on the properties of vulcanized rubbers made from nitrile rubbers with different contents of acrylonitrile, from polysulfide rubbers, and from a mixture of polysulfide and nitrile rubbers. Tests of softening nitrile rubber by a liquid polysulfide polymer have indicated an increase in resistance to swelling with the formation of cross linked network structure in the polysulfide polymer ||

during vulcanization. It is established that an increase of resistance to swelling of vulcanized rubbers in liquid fuels, containing a considerable amount of aromatic compounds is obtained by the use of mixture of nitrile rubber with polysulfide rubber. TITLE: Compensation of a geodetic network¹² by multiple groups with application of the Pranis-Praniewicz method with the use of Krakow algebra

SOURCE: Geodezja i kartografia, v. 14, no. 4, 1965, 243-249

TOPIC TAGS: geodesy, algebraic equation, digital computer, group theory, computer calculation

ABSTRACT: Using Krakow algebra by the method of Pranis-Praniewicz, the article presents a normal equation of "connective" unknowns as well as a system of equations defining the partially independent unknowns. The formulas permit arranging the calculations in groups and of using an assortment of digital computers with differentiated memories. Further transformation leads to very compact formulas which permit good organization of the calculations in the compensation of large geodetic networks. Orig. art. has: 15 formulas. [JPRS]

WINKELBAUER, KAREL

Winkelbauer, Karel. On the theory of generalized random processes. Czechoslovak Math. J. 6(81) (1953), 517-521. (Russian. French summary)

Let X be the class of functions on k -space which are complex-valued, infinitely differentiable, and have compact supports. Let \tilde{X} be the space of all Schwartz distributions on X . Let F be the space of complex-valued functions on X . Let \mathfrak{F} be the minimal σ -algebra of subsets of F containing those of the form

$$\{f: \operatorname{Re} f(\phi) < a, \operatorname{Im} f(\phi) < b\}$$

where $\phi \in X$. Let μ be a probability measure on \mathfrak{F} . Then it is proved that the outer μ measure of \tilde{X} is 1 if and only if the following two conditions are satisfied. I. If $\phi_1 \in \tilde{X}$, $f(\phi_1) + f(\phi_2) = f(\phi_1 + \phi_2)$ for almost all f in F (μ measure). II. (Let $k=1$; the condition in the general case is the natural reformulation.) If $\varepsilon > 0$, and if m is a natural number, there is an integer $N(\varepsilon, m)$ such that, if $r \geq N(\varepsilon, m)$, and if S is a finite subset of elements in X which vanish outside $[-m, m]$, then

$$\mu\left(\bigcap_{\phi \in S} \{f: |f(\phi)| \leq r(2m)^r \sup |\phi^{(r)}|\}\right) \geq 1 - \varepsilon.$$

If these conditions are satisfied, the triple (F, \mathfrak{F}, μ) defines a measure on the space \tilde{X} . [For other approaches to such measures, see I. M. Gelfand, Dokl. Akad. Nauk SSSR (N.S.) 100 (1955), 853-856; MR 16, 938; and K. Itô, Mem. Coll. Sci. Univ. Kyoto. Ser. A. Math. 28 (1954), 209-223; MR 16, 378.] J. L. Doob (Urbana, Ill.).

16(2) PHASE I BOOK EXPLOITATION CZECH/2556

Conference on Information Theory, Statistical Decision Functions, Random Processes. 1st, Liblice, 1956. Transactions. Prague, Czechoslovak Academy of Sciences, 1957. 354 p. 1,000 copies printed.

Sponsoring Agency: Československá Akademie Věd. Sekce Technická. Reviewers: Václav Dupák and Milošlav Jirýna; Scientific Ed.: Jaroslav Kofoňák, Corresponding Member, Czechoslovak Academy of Sciences; Resp. Ed.: Luděk Běha; Tech. Ed.: František Koničky.

PURPOSE: This book is intended for specialists interested in information theory and related subjects.

COVERAGE: The book contains papers read at the First Prague Conference on Information Theory, Statistical Decision Functions, and Random Processes, held on November 28 - 30, 1956. The Conference was sponsored by the Czechoslovak Academy of Sciences and organized by the Institute of Radio Engineering and Electronics. The papers deal with various mathematical approaches to the problems of communication theory, probability, properties of communication stochastic processes, prediction, entropy, transformations of stochastic processes, statistical decision functions, randomized functional analysis, etc. Participants from China, Germany, Poland, Sweden, the United States, and the Soviet Union were present at the Conference. Of the 21 articles in the book, 11 are in English, 4 in French, 2 in German, and 1 in Russian.
