Med Optimum conditions for the isolation of sodium glutamate from protein hydrolyzates. Aleksander Reinhercs, Antoni Świerczyński, and Stefan Wojtkowiak (Food Products Insts., Poznań, Poland). *Prace Inst. i Lab. Badawczych Przemysłu Rolnego i Spożywczego* 5, No. 4, 18-25 (1955).—Glutamic acid is pptd. at its isoelec. point (pH 3.2). Improved crystn. is obtained when the hydrolyzate is neutralized to pH 5.0, condensed *in vacuo* till salt of the amino acid ppts., and then acidified to pH 3.2. Crude glutamic acid is neutralized with soda and decolorized with activated C. Sodium glutamate is allowed to crystallize from a supersatd. soln. Gluten hydrolyzate yielded 7.23% and casein hydrolyzate 4.33% glutamate. A. S. S.

3

Abstract The effect of hydrostatic pressure on the denaturation of proteins under pressure has been studied. The proteins studied were wheat gluten, lupine, ovalbumin, and casein. The denaturation was measured by the change in optical density at 280 nm. The denaturation was found to be reversible for all proteins studied. The denaturation temperature decreased with increasing pressure. The denaturation temperature of wheat gluten decreased from 70°C at 1 atm to 55°C at 100 atm. The denaturation temperature of lupine decreased from 65°C at 1 atm to 50°C at 100 atm. The denaturation temperature of ovalbumin decreased from 60°C at 1 atm to 45°C at 100 atm. The denaturation temperature of casein decreased from 55°C at 1 atm to 40°C at 100 atm. The denaturation temperature of all proteins decreased linearly with increasing pressure. The denaturation temperature of wheat gluten decreased by 1.5°C/atm, lupine by 1.2°C/atm, ovalbumin by 1.0°C/atm, and casein by 0.8°C/atm. The denaturation temperature of all proteins decreased by 10°C at 100 atm. The denaturation temperature of all proteins decreased by 10°C at 100 atm. The denaturation temperature of all proteins decreased by 10°C at 100 atm.

Title : Absorption of Sulfur Dioxide in Solutions of Basic Aluminum Sulfate. VII. Mass Transfer Coefficient.

Orig Pub : Przem. chem., 1956, 12, No 1, 35-41

Abstract : Determination of approximate values of overall mass-transfer coefficient k_p , and also of partial mass-transfer coefficients k_g in gas film, and k_c in liquid film, in process of sulfur dioxide absorption in solution of basic aluminum sulfate. It was found that the rate of absorption depends on values of both partial coefficients. It follows therefrom that resistances of gaseous and liquid films are quantities of same order. Communication VI see RZhKhim. 1957. 63039.

Jablonski W., Wojtkowski J. Practical Methods of Technical Normalizing of Work on Wind Machines

MTV

„Praktyczne zasady technicznego normowania pracy na przewijakach”. Przemysł Włókienniczy, No. 1, 1955, pp. 9-13, 3 tabs.

To ascertain the number of drums per workman and calculate the practical factor for machine output, it is necessary to study photographic records of one day's work, at the same time analysing the work of the machine and of the operator. On this principle, a formula has been de-

duced for the machine output factor $\eta = \frac{52500 \cdot G \cdot Nm}{T_{pr} \cdot V}$ where G — is the weight of a cross-wound clew in g; Nm — metric number of yarn; V — winding speed in m/min; T_{pr} — actual winding time for one clew. To obtain the number of drums which may be attended simultaneously the time of winding of one drum on the machine must be divided by the time necessary for attendance at one drum stand.

Prindisz H., Jablonski W., Wojtkowski J. On Selecting the System of Feeding the Yarn Doubling Winder.

„O wyborze systemu zasilania bębnowego łączarki przędzy”. Przemysł Włókienniczy. No. 4, 1935, pp. 128--130, 2 tab.

The authors analyse two methods of feeding a fast doubling winder: 1) feeding from winding balls; 2) direct feeding from cops. The authors conclude that the first method is preferable since: 1) the output of the machine is increased; 2) production costs are reduced; 3) the speed can be increased even at greater number of doublings; 4) labour costs are reduced.

TITLE: Reduction of equations with four variables to Cauchy's canonical form with four variables

PERIODICAL: Referativnyy zhurnal. Matematika, no. 6, 1962, 42, abstract 6V202 (Zastosow. mat., v. 6, no. 1, 1961, 19-29)

TEXT: The necessary and sufficient conditions for the existence of anamorphizing functions which reduce the equation

$$F(x, y, z, w) = 0$$

to one of the following three forms are proved:

$$f(z) + g(x)h(y, w) + k(y, w) = 0;$$

$$f(z, w) + g(x)h(y) + k(y) = 0;$$

$$f(z) + g(x, w)h(y) + k(y) = 0.$$

Methods of calculating an anamorphizing function as an integral of a differential equation solvable by quadratures are indicated. It is proved that the anamorphizing function is accurately determined up to a constant factor. [Abstracter's note: Complete translation.]

TITLE: Production of cobalt oxalate from unpurified cobalt

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 23, 1962, 468, abstract 23K204 (Rudy i metale niezel., v. 7, no. 4, 1962, 168-171 [Pol.; summaries in Russ., Eng., French and Ger.])

TEXT: 3 parts by weight of water are added to 1 part by weight of unpurified Co powder (or paste) obtained hydro-pyrometallurgically from sludge and containing ~5% Fe, ~1% Mn, ~0.2% Cu, ~0.2% C and ~1% S. The mixture is heated to 80-90°C and small amounts of 65% HNO₃ are metered into it while it is energetically mixed for 2 hours without filtering until the metal is fully dissolved (3.8 ml HNO₃ per gram of Co), whereupon the solution is then diluted with water to a Co content of 90-100 g/l. A 50 g/l solution of KMnO₄ is mixed energetically into the dilute solution, which has been heated to 80°C, at a rate of twice the stoichiometric quantity in relation to the Mn contained in the solution. A 13% solution of NH₄OH is

Card 1/2

Production of cobalt oxalate...

S/081/62/000/023/059/120
B160/B186

then introduced into the solution, from which the Mn precipitates in the form of MnO_2 , to a pH of about 6.5. Then, the precipitate containing the Fe and Cu impurity is filtered out. The filtrate contains a purified solution of $Co(NO_3)_2$ from which Co oxalate is precipitated at $80^\circ C$ by adding hot 50% oxalic acid (3.48 g of $H_2C_2O_4$ per gram of Co in the solution). The product obtained can be used for the manufacture of catalysts and Co powder. The process flow-sheet is given. 8 references. [Abstracter's note: Complete translation.] ✓

Sixty-one patients were examined. In the ECG the lowered ST segment at least in 2 leads was found in 9 cases and flattened, two-phase or negative T wave in 10 patients. These abnormalities are probably due to damage of the myocardium by one of the following factors: action of specific virus, toxic influence of icterus, protein disturbances or disturbances of oxidizing processes in myocardium. In 9 patients there were ECG signs of vagotonia. The size of the ventricular gradient was normal but with tendency to low values. In several patients some abnormalities as to the direction of gradient were found. Strackowski - Białystok (XX, 6, 18)

Title : Rapid Complexometric Method of Determining Calcium and Magnesium in Milk

Orig. Pub. : Roczn. technol. i chem. żywn., 1957, 1, 69-83

Abstract : The diluted sample of milk is titrated with a solution of di-sodium salt of ethylenediamine-tetracetic acid. Colloidal compounds of Ca contained in the milk are decomposed by heating at 75° in alkaline medium, proteins are precipitated with HNO₃. Accuracy of determination of Ca ~ 2.8% (with a probability of 0.95%). Described is a rapid method of Ca determination, based on the constant value of the CaO:MgO ratio in milk. Accuracy of the method ~ 2.9%. The method is suitable for use in technical analyses of milk. According to the authors' summary.

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 3, 14 Jan 63, pp 95-99.

Abstract: [Author's English summary modified] Two cases are reported with Hashimoto lymphatic struma, treated surgically with post-operative thyroid extract administration. One case was successful, the other developed sarcoma of the thyroid gland, pushing the trachea up to eventual asphyxiation. Post-mortem histological findings are given. There are 10 references, of which 5 are Polish, one Russian, and 4 English.
