AUTHORS: Miroshnichenko, L. D., and Yevstigneyeva, R. P.
TITLE: Prototropic regrouping in some dipyrromethenes
PERIODICAL: Akademiya nauk SSSR. Izvestiya. Seriya fizicheskaya,
v. 27, no. 1, 1963, 50-52

TEXT: Important natural compounds, as e.g. chlorophyll or hemin are based on two dipyrromethenes that tend to isomerism. A study of the behavior of these substances can give information on the processes of metabolism. One group of mesosubstituted dipyrromethenes was investigated:

Card 1/2

Prototropic regrouping in ...

8/048/63/027/001/018/043
B108/B186

- (I) — $R_1 = R_2 = R'_1 = R'_2 = CH_3$, $R_4 = R_5 = COOC_2H_5$;
- (II) — $R_1 = R_2 = R'_1 = R'_2 = CH_3$, $R_3 = R'_3 = COOC_2H_5$;
- (III) — $R_1 = R_2 = R'_1 = R'_2 = CH_3$, $R_4 = R'_4 = COOC_2H_5$;
- (IV) — $R_1 = R_2 = R'_1 = R'_2 = CH_3$, $R_3 = R'_3 = COOC_2H_5$.

Prototropic regroupings were observed between these dipyrromethenes. Spectrophotometric titration showed that this regrouping during alkalization takes place at a certain pH (between 10 and 11). There are 2 figures.

TOPIC TAGS: frequency changer, frequency converter, frequency conversion

ABSTRACT: The Laboratory has developed static ferromagnetic quadruplers, octuplers,
and nonuplers with self-magnetization by flux intermediate harmonics, with single-
and 3-phase output; also, a 1.5-ratio frequency changer has been developed. Their
principal characteristics, power and weight data are reported. Specifically, the
weight of active material varies from 36 to 29 kg/kva for capacities 1--6 kva;
efficiency, 70--80%. With an input voltage variation of 90-110%, the quadrupler
voltage varies only by ± 5 --8%. The output voltage of a negative-feedback-type
octupler varies only by ± 2 % with a load current varying from zero to 130% its

Card 1/2

ACC NR: AR6028422

nominal value. The octupler output voltage can be regulated within $\pm 1\%$ by controlling its magnetization current. The efficiency of the 1.5-ratio frequency changer is 60--70%. It is capable of stable operation despite input voltage and load variations within $\pm 50\%$ of their nominal values. Four figures. Bibliography of 4 titles. S. Shapiro [Translation of abstract]

"Biokhim" Vol XIV, No 3

Research proves false the "opinion held in literature" that the Russian sugar beet does not contain glutamine, showing that it does contain both glutamine and asparagine in the leaves (although only in traces) and in the beet itself. Quantities of both acids increase as the beet matures, attaining a

Synthesis of protein from asparagine and glutamine in wheat sprouts. V. L. Kretovich and Z. G. Evstigneeva (A. N. Bakii Biochem. Inst., Acad. Sci. U.S.S.R., Moscow). *Doklady Akad. Nauk S.S.S.R.* 93, 870-81 (1953).—When asparagine or NH₄ aspartate are infiltrated into wheat sprouts, protein synthesis takes place readily, although the latter substance is more readily assimilated. Asparagine is less readily assimilated than glutamine or NH₄ glutamate. Thus glutamine and asparagine are not equiv. in protein synthesis.

of Biological Sciences

TITLE: On Nitrogenous Substances in the Juice of Pumpkins

PERIODICAL: Priroda, 1959, ^{1/8}Nr 5, pp 97 - 99 (USSR)

ABSTRACT: The authors state that the roots of plants absorb inorganic nitrogen from the soil. Amongst other researchers, D.N. Pryanishnikov and A.A. Shmuk studied the suitability of various nitrogen compounds for diverse plants. D.A. Sabinin's suggestion that the root system, in addition to its functions of absorption, anchorage, conduction and storage of food materials, also synthesizes several most important organic compounds was confirmed by the research results of A.A. Shmuk, A.L. Kursanov and other researchers. Grafting and a detailed study of the chemical composition of plant saps and juices were the methods employed. L.S. Litvinov investigated the problem of the presence of albumin

Card 1/2

SOV/26-59-5-25/47

in the plant sap. T.I. Smirnova and S.Ya. Frenkel' of the Institut vysokomolekulyarnykh soyedineniy (Institute of High-Molecular Compounds) determined the molecular weight of the albumin contained in the sap to be about 100,000. From the experiments carried out by the authors with a culture of pumpkins, they found that only a small amount of albumen of the albumin type, is contained in the juice. This albumin was connected with silica and calcium compounds. The amount of nitrogenous substances in the juice is not affected by the kind of nitrous fertilizer in the soil. There are 6 Soviet references.

TITLE: Assimilation of ammonia, labelled with radioactive nitrogen, by the root system

PERIODICAL: Chemie a chemická technologie. Přehled technické a hospodářské literatury. Vol.18, No.2, 1961, page 99. Abstract Ch 61-1353 (Biochimica, 1960, Vol.25, No.3, pp.476-481.)

TEXT: Radioactive nitrogen was applied in the described trials in the ammonia group of ammonium nitrate. The trials were conducted with marrows. Nitrogen in this form is very rapidly accepted and transported to the rest of the plant. Part of the nitrogen of the ammonium salt is converted into the amino group of asparagine and glutamine already in the roots. The rate of contribution of ammonia to protein synthesis in the sap is of a considerably lower order.
4 tables, 16 lit.references.

Title : To improve the Ground-to-Air Control Service (GACS)

Periodical : Vest. vozd. flota, 10, 29-33, 0 1954

Abstract : The author describes the GACS which in any weather and at any time observes the flight of aircraft, determines its course, speed, altitude, secures a high exactitude in navigation, guides the fighter to his air targets and brings the aircraft down for landing. The author gives the general outline of the organization of the GACS, and describes its action in several examples. Some names of officers are mentioned.

ge from the Twenty-First Century; Stories of the Twenty-First
Century from the Scientists on Science and Engineering of the Future)
Izd-vo Sovetskaya Rossiya, 1980. 243 p. 50,000 copies printed.

Ed.: V. A. Golubkova; Tech. Ed.: O. I. Kleyva.

PURPOSE: This book is intended for the general reader.

COVERAGE: The book contains 27 articles (told reporters by
Soviet scientists) dealing with probable future progress in
physics, chemistry, electricity, metallurgy, engineering,
mining, medicine, biology, astronomy, ecology, transportation,
exploration of space, robotics, geology, etc. Attention is given to
automation, automation of oil fields, atomic electric stations,
production of metal parts by the process of explosion, explosions
