Design of door-shutting mechanism of hopper distributor
for winter operations

Periodical : Gidr. stroi., v.24, no.2, 43-44, 1955

Abstract : The operation of the pneumatic drive and sector bottom gate of hoppers are often interrupted in winter due to freezing. Therefore, many mixing plants discontinue their use. The author suggests a new design whereby the pneumatic cylinder is placed inside the mixing plant connected to the outside lever by a rod.

TITLE: On the Effect of Initial Distortions on the Operation of Welded Bridge Structures (K voprosu o vliyanií nachal'nykh iskrivleniy na rabotu svarnykh mostovykh konstruktsiy)

PERIODICAL: Tr. Mosk. avtomob. dor. inst., 1957, Nr 21, pp 133-141

ABSTRACT: The author presents data pertaining to the appearance of extensive buckling observed by experimental means in reinforcing ribs and thin vertical walls of beam-type, high-clearance panel bridges. An attempt is made to evaluate approximately the changes in the stressed state occurring in the vicinity of areas affected by buckling by means of utilizing the magnitude of mean stresses without taking into account the factor of flexure.
