TITLE: Relationship between depolarization and contraction in various skeletal muscles of mammals

SOURCE: Fiziologicheskiy zhurnal SSSR, v. 51, no. 6, 1965, 653-662

TOPIC TAGS: myology, muscle physiology

ABSTRACT: The contraction of a number of skeletal muscles (diaphragm, levator scapulae dorsalis, trapezius, latissimus dorsi) of hedgehogs and cats in solutions of potassium salts was studied and related to depolarization. As indicated by the capacity for contraction, all skeletal muscles of the hedgehog had a relatively high tonicity, which did not vary from muscle to muscle, while the tonicity of muscles of the cat was lower and varied with the kind of muscle, that for m. latissimus dorsi being particularly low. The depolarization gradient was smaller for muscles with a low tonicity than those with a high tonicity. One may assume that in the course of evolution some sort of adaptation to the irritating effect of depolarization took place and that this adaptation is presumably associated with a reduced permeability of muscle cell membranes to KCl. Orig. art. has: 5 figures and 3 tables. [JPS]

TITLE: Aircraft turbodrive. Class 47, No. 171234

SOURCE: Byulleten' izobreteni i tovarnykh znakov, no. 10, 1965, 106

TOPIC TAGS: aircraft turbodrive, constant rpm generator, torus drive, gear train

ABSTRACT: An Author Certificate has been issued for an aircraft turbodrive unit for the air-turbine starting of engines and for driving a constant-rpm a-c generator. The unit contains an air turbine, an a-c generator, a starter and generator gear train, and an unguided free-wheeling clutch. For increased economy and reliability, to decrease weight, and to shorten starting time, the unit is equipped with a twin torus drive in the form of two driver torus disks mounted on a drive shaft and two driven torus disks mounted on a fixed shaft and separated by a thrust bearing. The unit is also equipped with intermediate rollers which are automatically rotated by

Card 1/3

a control device; these provide interaction between the driver and the driven torus disks in transmitting rotation from the engine to the constant-rpm generator through a differential control mechanism and the generator gear train (see Fig. 1 of the Enclosure). Orig. art. has: 1 figure.

TITLE:

On the Degree of Infestation of Mintay (Theragra Chalcogramma Pal.)
With Parasites and Its Use in Fishery (O zarazhennosti mintaya
parazitami i yego promyslovom ispol'zovanii)

PERIODICAL:

Doklady Akademii nauk SSSR, 1959, Vol 125, Nr 5, pp 1174-1176
(USSR)

ABSTRACT:

The natural sources should be opened up to the highest possible extent and an abundant supply of food should be established. Theragra chalcogramma belongs to the hitherto not sufficiently known fish species of the Far East. Many fish species of better taste occur in the Far East, and the afore-said species is, moreover, not liked because of its infestation by parasites. This infestation renders the fish species unappetizing for the consumer and leads to misunderstandings and to the fact that the fish finds no sale. The authors tried to answer the following questions: 1) Is flesh of Theragra chalcogramma infected with parasitic worms?; if this is the case, how far? 2) Are among the parasites of Theragra chalcogramma any species which are harmful to man? 3) Which investigations are to be carried out in order to decide definitely

Card 1/3

On the Degree of Infestation of Mintay (Theragra Chalcogramma SOV/20-125-5-60/61
Pal.) With Parasites and Its Use in Fishery

the problem of the use of Theragra chalcogramma? - Table 1 shows the results of the sections in 1951-55 in the region of the zaliv Petra Velikogo (Petr Velikiy Bay), Avachinskaya bukhta (Avachinskaya Bay), Kamchatskiy zaliv (Kamchatka Bay), and Kronotskiy Bay. None of the known parasites of Theragra chalcogramma is harmful to man. There is no reason for disqualifying entire catches or fishery regions because of infestation of the flesh. Careful sanitary control, the elimination of highly infected fish, furthermore, the removal of infected intestines may easily eliminate parasites in fish for sale. The working process is to be chosen according to the kind of infestation (salting, freezing, hashing, etc.). In order to find out the best time and the best regions for catch, investigations of the age- and seasonal dynamics of parasites have to be carried out. There is assumed that the frequently voiced alarming news from the (Soviet) Far East are not fully justified. It is 1 table.

plasticity and enhance a number of properties the MF-17 resin is plasticized with hydroxyterpene resin (VTU 628-55), or with rosin and drying oil. A graphic method has been developed for the determination of the amount hardening agent necessary to impart to the primer the required useful life, using as a basis the useful life of MF-17 resin. The primer dries on the wood surface within 1.5-2 hours at 18-20°, within 20-30 minutes at 45-50°. The composition of the primer can include 8-10% mineral filler, and it can be colored with water-soluble acid dyes. The coverage is of 60-80 g/m² when applied by

TOPIC TAGS: footgear, test stand, wear resistance

ABSTRACT: This Author's Certificate introduces: 1. A device for testing footwear under dynamic conditions. The unit consists of a movable last for the specimens of footgear to be tested, an attachment for controlling the pressure on the last, a drive with crankshaft, connecting rods and cam mechanism, removable abrasive surfaces and registration equipment. The machine components are mounted on a stand. The installation is designed for comprehensive testing of a number of properties of footgear, e. g. water resistance, sole durability and thermal insulation properties. The device is equipped with a platform which is driven with a reciprocating motion synchronized with that of the last. The abrasive surface or medium which interacts with

TITLE: Method of measuring the flow rate of electroconductive fluids.
Class 42, No. 178512 14 9M

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki,
no. 3, 1966, 69

TOPIC TAGS: flow meter, flow ionization, electroconductive fluid,
flow rate

ABSTRACT: An Author Certificate has been issued describing a method
for measuring the flow rate of electroconductive fluids by flow ioniza-
tion. To extend measurement limits, the flow is passed through a con-
ductometric cell, and measurements are made of the impedance of the
flow. This varies depending on changes in the capacity of the double
layer of ions formed near the electrode and in the capillary and on
changes in the mobility of ions during the passage of the liquid
through the capillary. The above changes represent the flow rate
measurement.

No. 178513

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 3, 1966, 69

TOPIC TAGS: flow meter, electroconductive liquid, flow measurement, flow rate

ABSTRACT: An Author Certificate has been issued for a device for measuring the flow rate of electroconductive fluids equipped with a differential sensor, a balance amplifier, and a microammeter. To extend the measurement limits toward the low end, the sensor is designed in the form of two conductometric cells, one of which contains a stationary liquid and the other the liquid passing through it. Each cell consists of two containers, each with an electrode. The containers are connected by a capillary. [LD]

Title : The Significance of Microbiological Data in Developing the Theory of Evolution

Orig Pub : Vopr. filosofii, 1957, No 2, 117-127

Abstract : Examples are cited of an experimental conversion of one species of micro-organism into another (a plague into a pseudotubercular one, intestinal bacterium into a paratyphoid bacterium). Identification of bacterial species is given. It is acknowledged that the organism's leading characteristics are adapted beforehand to the external conditions which cause the changes. The author limits the activity of natural selection to the adaptation to relatively changed characteristics. An admittedly secondary species formation behaves like a newly formed species.

Title : On the Nature and Significance of Bacteriophagia. Report
XI. On the Theory of Bacteriophagia in the Light of New
Experimental Data.

Orig Pub : Zh. mikrobiol., epidemiol. i immunobiol., 1957, No. 12, 76-81

Abstract : A critical survey. In the opinion of the authors, the data
of the last few years on the mechanism of lysogeny, induc-
tion, the introduction of phage into the bacterial cell, the
results of isotopic research, the phenomena of transduction "have
considerably weakened the position of the parasitic theory
of bacteriophagia and have contributed a series of arguments
in favor of an endobacterial point of view". The authors
surmise that one of the factors in nature which induce phage
formation may be the action of symbiotic microbes. The bi-
bliography contains 50 titles.

TITLE: Microorganisms and Heredity

PERIODICAL: Nauka i zhizn', 1959, Nr 8, pp 9-14. (USSR)

ABSTRACT: The editors refer to issue 1 of this journal for 1959 where an article on "The Heredity of Man" by Candidate of Biological Sciences, A. Emme, was published. Upon careful study of the article, the Board of the Vsesoyuznoye obshchestvo po rasprostraneniyu politicheskikh i nauchnykh znanii (All-Union Society for the Dissemination of Political and Scientific Knowledge), in conjunction with the section of biological sciences, disagreed with A. Emme's viewpoint. For this reason, a series of articles will be published presenting this important problem correctly. This is the first part of this series and deals with the role of deoxyribonucleic acid (DNA), a basic compound of a chromosome, in heredity, and in particular with the

"mechanism" of hereditary transmission. In this connection, the authors refer to experiments carried out by L.M. Kozlov, who proved that DNA of phagenic particles, which developed after the destruction of the bacterial cell, differ from the DNA which appeared during the activity of bacteriophage. In the present article, nearly exclusively based on foreign research, the authors try to refute Weismann's and Morgan's conception, especially the thesis of the autogenesis of molecules, by promoting Michurin's ideas. There is 1 diagram and 1 photograph.

ABSTRACT: This is the end of an article published in Nr 8 of
this journal. In the section "dissociation" the
authors refer to American and English specialists,
in particular to Dr. Brown in whose opinion a dis-
sociation is equal to a series of mutational changes.
The authors contradict this assumption, as disso-
ciable phenomena embrace many traits whereas in most
cases mutation concerns single traits. In 1887, the
Russian scientist M.G. Kossyakov and later on I.V.
Michurin proved the adaption of bacteria to toxins.
Recently, Professor A.A. Imshenetskiy stated also that
bacteria may be adapted practically to all substances
being harmful to them. In this connection, the authors
refer to Everi who discovered the bacterial trans-
