TITLE: Preparation of tetraalkyl pyrophosphates

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 2, 1963, 405, abstract
2N45 (Polish patent 45271, Oct. 16, 1961)

TEXT: Tetraalkyl pyrophosphates represented by the formula $R_4P_2O_7$ (I),
where R= alkyl, are prepared by a reaction of dialkyl phosphites R_2HPO_3
(II) with NOCl in the presence of HCl-fixing substances, such as
pyridine (III) or without them. A solution of 1-1.5 mole of NOCl in
 C_6H_6 is added drop by drop at 20-35°C to a solution of 1 mole of II and
1 mole of III in ligroin or in C_6H_6 , vigorously stirred and periodically
water-cooled. The hydrochloride of III is filtered out and the solvent is
then eliminated by vacuum distillation. Very pure I is thus prepared with
a yield of 80-90% in respect to II. I may be produced by the action of
NOCl on II without the use of amine to fix HCl, but in that case the

Preparation of tetraalkyl ...

yield and the quality of I deteriorate. A 0.275 mole solution of NOCl in 100 ml of C₆H₆ at 25-30°C is poured during 30 min into a solution of 0.25 mole of II (R= C₂H₅) and of 0.25 mole of III in 150 ml of ligroin. The hydrochloride of III is separated, the solvents eliminated by vacuum distillation and 30.2 g (83%) of I (R= C₂H₅) are obtained. This compound has a boiling point at 88-89°C/ 0.01 mm and n²⁵D= 1.4179.. In another case, a solution of 0.1 mole of NOCl in 50 ml of C₆H₆ at a temperature ≤ 25°C is poured during 20 min into a stirred solution of 0.1 mole of unrefined II (R= C₆H₅CH₂) and of 0.1 mole of III in 100 ml of C₆H₆. The hydrochloride of III is filtered out, C₆H₆ is eliminated in vacuo. The residue is washed with 50 ml of water and 50 ml of a dilute solution of NH₃ until pH=8. After several minutes the oil crystallizes. The product is filtered out, recrystallized and I [(R= C₆H₅CH₂), melting point 60-61.5°C] is obtained with a yield of 75%. (from benzene-cyclohexane)

"The Course and Treatment of Toxocara canis in Young Arctic Foxes (*Alopex lagopus*) under Fox-Farm Conditions"

Lublin, Medycyna Weterynaryjna, Vol 22, No 4, 1966, pp 204-208.

Abstract: The paper describes a study of invasion of *T. canis*. Three stages have been distinguished in the course of the disease, and the symptoms and duration of each are described. Early worming was used therapeutically without adverse effects. The absence of eggs in the feces does not rule out the presence of the disease.

"Asher Syndrome. Case Report."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 22, 27 May 63,
pp 795-797

Abstract: [Authors' English summary] Authors describe a case (28th in world literature and 2nd in Poland) of Asher syndrome with blepharochalasis of the Fuchs type, double lip, and struma without any signs of Basedow's disease. They are of the opinion that surgical treatment of the lip may be effective if performed after puberty, but that surgical treatment of the eyelids may be only of transient cosmetic effect because of the progressive atrophy of the skin. There are 25 references, one Polish, 9 German, and 15 Western.

Orig Pub: Med. weteryn., 1957, 13, No 7, 394-398.

Abstract: The mange of polar foxes was observed on two fur farms. In the affected animals, the following symptoms were noticed: husky scaling of the skin of the back abdomen and lumbs, formation of crusts on the paws and tail, ruffled condition of the hair, and severe itching. The hair was not shed. The examination of scrappings revealed the presence of *Sarcoptes scabiei*. The treatment of affected animals by

ABSTRACT : 80-150 mg of a substance are dissolved in 1000 ml water. 10 ml of solution are tested coulometrically (electrolyte - 10% KBr solution in a mixture with 15% solution of H₂SO₄). An average error in the determination of novocaine (I) is ± 1%, of n-aminobenzoic acid (II) is ± 1.2%. A method of separation of I and II by electrophoresis on paper at pH of 5.0-9.0 is developed. An average error of a single determination: for *ties.

Zirconium deposits in western Pomorze (Poland).
Józef Ziernicki (Univ., Wrocław, Poland). *Izotopika* 14,
15(1973)(1974). -Classification of the Baltic black sands of
western Pomorze gave the following particle size distribution:
0.2% of the grains 0.5-2.0 mm., 60.0% 0.2-0.3,
and 40.8% 0.0-0.2 mm. Mineralogical analysis shows
that the fraction with grains larger than 0.2 mm. con-
tained magnetite 8.4, ilmenite 6.4, rutile and nigrine
1.01, and selenite 0.12%. The fraction with grains smaller
than 0.2 mm.: magnetite 5.0, ilmenite 10.2, rutile and
nigrine 2.75, and selenite 1.44%. A review of world sources
of supply and uses of the various components of black sand
is included.

Apr 1947

"Bottom Deposits of the Aral Sea," V. P. Zunkovich,
Fiz. Zeml. No. 4, 1947, No. 4.

Geographically describes the Aral Sea, and discusses
its geology. Describes various investigations of the
sea bottom deposits studied by author. Some 92
samples subjected to determination of carbonates,
microscopic analysis, and mechanical analysis of
silts. Relative rate of sedimentation in different
parts of the basin greatest in regions in front of
the delta; maximum rate of sedimentation supposed in
central part of the basin, where sediment supposed pre-
sumably chemical. Deposits in shallow water areas
primarily to dying-out fauna and denudation of
silil deposits.

"Bacteriostatic and Bacteriocidal Agents Used in Pharmacy".

Warsaw, Farmacia Polaka, Vol 10, No 24, 30 Dec 62, pp 587-591.

Abstract: The authors review the nature and mode of action of bacteriostatic and bacteriocidal agents which are used as preservatives in injectable, ophthalmic, internal and external drug preparations. A table is given which lists twenty nine reagents of this type. Their concentration, toxicity, mode of action, application and suitable media are listed. Seventy references are cited. Three of the references are from the Soviet block.

"Antioxidants and their Application in Pharmacy."
Warsaw, Farmacja Polska, Vol 19, No 13-14, 25 Jul 63, pp
271-274

Abstract: The authors discuss the importance of preventing oxidation of pharmaceutical preparations and the means by which this can be accomplished. They then give a complete listing of antioxidants (stabilizers) and their specific uses in three main groupings: A. Natural antioxidants, B. Synthetic antioxidants, and C. Synergetic substances. There are no references listed, with a note that the list is available from the authors.

"Time of Day at Which Foaling Occurs."

Lublin, Medycyna Weterynaryjna, Vol 21, No 10, Oct 65; pp 614-616.

Abstract [English summary modified]: Study to verify the truth of the old popular belief that mares always give birth to their foals during the most inconvenient time of the night - analysis of 1007 cases during a period of 9 months seems to confirm it: over 75% were born at night. This is attributed to neuropsychological influences, ability of pregnant mare to postpone onset of parturition until the stable is relatively quiet. Four Polish 1 German ref.

AUTHORS: Michalski, Jan, Zwierzak, Andrzej

TITLE: Preparation of tetraalkyl pyrophosphates

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 2, 1963, 405, abstract
2N45 (Polish patent 45271, Oct. 16, 1961)

TEXT: Tetraalkyl pyrophosphates represented by the formula $R_4P_2O_7$ (I),
where R= alkyl, are prepared by a reaction of dialkyl phosphites R_2HPO_3
(II) with NOCl in the presence of HCl-fixing substances, such as
pyridine (III) or without them. A solution of 1-1.5 mole of NOCl in
 C_6H_6 is added drop by drop at 20-35°C to a solution of 1 mole of II and
1 mole of III in ligroin or in C_6H_6 , vigorously stirred and periodically
water-cooled. The hydrochloride of III is filtered out and the solvent is
then eliminated by vacuum distillation. Very pure I is thus prepared with
a yield of 80-90% in respect to II. I may be produced by the action of
NOCl on II without the use of amine to fix HCl, but in that case the

Preparation of tetraalkyl ...

yield and the quality of I deteriorate. A 0.275 mole solution of NOCl in 100 ml of C₆H₆ at 25-30°C is poured during 30 min into a solution of 0.25 mole of II (R= C₂H₅) and of 0.25 mole of III in 150 ml of ligroin. The hydrochloride of III is separated, the solvents eliminated by vacuum distillation and 30.2 g (83%) of I (R= C₂H₅) are obtained. This compound has a boiling point at 88-89°C/ 0.01 mm and n²⁵D= 1.4179.. In another case, a solution of 0.1 mole of NOCl in 50 ml of C₆H₆ at a temperature ≤ 25°C is poured during 20 min into a stirred solution of 0.1 mole of unrefined II (R= C₆H₅CH₂) and of 0.1 mole of III in 100 ml of C₆H₆. The hydrochloride of III is filtered out, C₆H₆ is eliminated in vacuo. The residue is washed with 50 ml of water and 50 ml of a dilute solution of NH₃ until pH=8. After several minutes the oil crystallizes. The product is filtered out, recrystallized and I [(R= C₆H₅CH₂), melting point 60-61.5°C] is obtained with a yield of 75%. (from benzene-cyclohexane)
[Abstracter's note: Complete translation.]

Lublin, Medycyna Weterynaryjna, Vol 22, No 4, 1966, pp 204-208.

Abstract: The paper describes a study of invasion of *T. canis*. Three stages have been distinguished in the course of the disease, and the symptoms and duration of each are described. Early worming was used therapeutically without adverse effects. The absence of eggs in the feces does not rule out the presence of the disease.

Contains a summary in English, 3 Tables and 14 references (1 Polish, 7 Western, 4 Russian and 2 German-language).

pp 795-797

Abstract: [Authors' English summary] Authors describe a case (28th in world literature and 2nd in Poland) of Asher syndrome with blepharochalasis of the Fuchs type, double lip, and struma without any signs of Basedow's disease. They are of the opinion that surgical treatment of the lip may be effective if performed after puberty, but that surgical treatment of the eyelids may be only of transient cosmetic effect because of the progressive atrophy of the skin. There are 25 references, one Polish, 9 German, and 15 Western.

Title : Mange of Polar Foxes (*Alopex lagopus L.*). Treatment With Hexachlorocyclohexane.

Orig Pub: Med. weteryn., 1957, 13, No 7, 394-398.

Abstract: The mange of polar foxes was observed on two fur farms. In the affected animals, the following symptoms were noticed: husky scaling of the skin of the back abdomen and lumbs, formation of crusts on the paws and tail, ruffled condition of the hair, and severe itching. The hair was not shed. The examination of scrappings revealed the presence of *Sarcoptes scabiei*. The treatment of affected animals by

ORIG. PUB. : Acta polon. pharmac., 1958, 15, No 3, 175-178

ABSTRACT : 80-150 mg of a substance are dissolved in 1000 ml water. 10 ml of solution are tested coulometrically (electrolyte - 10% KBr solution in a mixture with 15% solution of H₂SO₄). An average error in the determination of novocaine (I) is ± 1%, of n-aminobenzoic acid (II) is ± 1.2%. A method of separation of I and II by electrophoresis on paper at pH of 5.0-9.0 is developed. An average error of a single determination: for *ties.

Zirconium deposits in western Pomorze (Poland). Józef Zwierzycki (Univ., Wrocław, Poland). *Hakut* 14, 151-2 (1947).—Classification of the Baltic black sand of western Pomorze gave the following particle size distribution: 0.2% of the grains 0.5-2.0 mm., 50.0% 0.2-0.5, and 49.8% 0.0-0.2 mm. Mineralogical analysis shows that the fraction with grains larger than 0.2 mm. contained magnetite 3.4, ilmenite 5.4, rutile and nigrine 1.01, and zircon 0.12%. The fraction with grains smaller than 0.2 mm.: magnetite 5.0, ilmenite 10.2, rutile and nigrine 2.75, and zircon 1.44%. A review of world sources of supply and uses of the various components of black sand is included.

Warsaw, Farmacia Polaka, Vol 10, No 24, 30 Dec 62, pp 587-591.

Abstract: The authors review the nature and mode of action of bacteriostatic and bacteriocidal agents which are used as preservatives in injectable, ophthalmic, internal and external drug preparations. A table is given which lists twenty nine reagents of this type. Their concentration, toxicity, mode of action, application and suitable media are listed. Seventy references are cited. Three of the references are from the Soviet block.

"Time of Day at Which Foaling Occurs."

Lublin, Medycyna Weterynaryjna, Vol 21, No 10, Oct 65; pp 614-616.

Abstract [English summary modified]: Study to verify the truth of the old popular belief that mares always give birth to their foals during the most inconvenient time of the night - analysis of 1007 cases during a period of 9 months seems to confirm it: over 75% were born at night. This is attributed to neuropsychological influences, ability of pregnant mare to postpone onset of parturition until the stable is relatively quiet. Four Polish 1 German ref.

Title : Concerning the Question of Elimination of Imported Raw
Materials from the Manufacture of Household Chinaware.

Orig Pub: Szklo i ceram., 1958, 9, No 5, 137-140.

Abstract: Several examples of gradual substitution of imported
kaolins and clays in masses for household chinaware
(C) at Polish factories with domestic clays of the
Polish People's Republic are cited. The complete eli-
mination of imported clays (with the exception of 1 - 2%
Chasov-Yar clay from USSR) from C masses caused a decrease
