ADMW-GA

1. Effective 1 February 1983 the CAMS II Staff will be renamed the CAMS Integration Staff and become the single focal point for managing the CAMS (both I and II) hardware and software maintenance and development activities. In assuming these responsibilities the CAMS Integration Staff will have the following responsibilities:

- o Provide management support to the operational CAMS I system.
- o Manage the direction and tasking of all CAMS development and maintenance resources.
- o Review, evaluate, and coordinate through appropriate mechanisms, RFCs and resolution of documented system discrepancies. This will be accomplished through the Integration Team.
- o Approve and prioritize through board mechanisms the implementation of changes to CAMS (RFCs). This will be accomplished through the COMIREX Staff CCB.
- o Provide for the definition and specification of system requirements and impacts for CAMS and interfacing systems. This shall include currently operating systems as well as systems under development.
- o Manage and coordinate the interface control documentation between CAMS segments and between CAMS and external data management systems.
- o Coordinate the transition of changes to the operational system.

2. In light of these changes I want to review the charter of the Integration Team, the ICCB, the Memoranda of Agreement with ODP and CPO and the interactions with their CCBs. He should recommend changes

3. Also effective on 1 February 1983 the CAMS Management Branch of the Operations Division will be renamed the CAMS Operations Branch (COB). This Branch will continue to have responsibility for the operation of the CAMS system. This includes scheduling of CAMS operations and support to operational users. In addition, COB will have the responsibility to determine and document discrepancies of the operational system and to review and coordinate software release plans. With regards to customer support, COB will continue to manage CAMS security and system access, schedule terminal installations and related communications, CAMS training and CAMS user manuals, assistance and support.

4. The purpose of organizational changes for these two elements of the COMIREX Staff is to provide more focus in managing CAMS operations, software maintenance and system developmental activities. The purpose of renaming these elements is to more accurately reflect their responsibilities.
