DIRECTOR OF CENTRAL INTELLIGENCE
Committee on Imagery Requirements and Exploitation

4 March 1983

MEMORANDUM FOR: [redacted]
Chief, Administrative Staff, ICS

25X1

SUBJECT: Secure Telephone Units (STU-II) [redacted]

25X1

1. This memorandum is intended to document the COMIREX Staff FY 84 and 85 STU units in response to the memorandum from the National Security Agency on the same subject, dated 8 February 1983, [redacted]. In addition to [redacted] additional units projected for and included in the FY 84 budget up to [redacted] STU units are desired for FY 85. In all cases an STU unit is intended to include a total system with a junction box [redacted]. The purpose of these units is to assure that all of the major elements of the COMIREX are linked together by a highly reliable secure telephone system. As you are aware with the changing collection environment, even more near-real-time tasking and collection will be taking place. It is important that the COMIREX Staff has a dependable secure telephone system. [redacted]

2. In light of the uncertainty of the specific location of all of the elements of the COMIREX Staff, it is impossible to specifically identify the building that these units will reside in. However, at the present time (when all units are available) I would use them to assure I could contact each of my two division chiefs and head of the CAMS Integration Staff. One unit would be emplaced in the element responsible for the maintenance and operation of the CAMS system. The other two units would be in the tasking officer's operations area in Washington [redacted]
