17 December 1956

MEMORANDUM FOR: Project Director

SUBJECT: Comparison of E.K. and Advanced Base Processing
of Photographic Material

1. As per your verbal request of 14 December I have had prepared the attached brief memorandum which points up aspects of photographic processing quality achieved at E.K. and at the advance base.

2. As I mentioned to you it is not possible at the present time to make a critical scientific comparison of the processing performance at both locations. It was suggested that for some future mission one-half of the unprocessed photographic negative material be forwarded to E.K. for processing and the other half be processed at URPIC and URPIC 1 or both.

3. The eight (8) photographic prints forwarded herewith tell their own story and the remarks in the attached memorandum have been keyed to them by number.

4. It is hoped that no completely definitive conclusion will be drawn from this memorandum but that the data contained might be useful to you as a preliminary step in setting up a more completely diagnostic experiment.

ARTHUR C. LUNDANL
Chief, HTAUTOMAT

Attachments

1. Draft of data concerning above subject.
2. Eight (8) photographic prints
