Under certain conditions specifically occurring in the  
glass industry a not inconsiderable change in the  
quantities of gas flowing in the furnace channels and  
in the upper furnace should be anticipated as a con-  
sequence of an unfavorable pattern of furnace pres-  
sure. (Enlarged version of a lecture held before the  
32nd Symposium on Glass Technology, Freudenstadt,  
Germany, May 21, 1958)
