Trans. of Annalen der Physik (Germany) 1932, ser. 5, v. 13, no. 7, p. 802-810.

DESCRIPTORS: *Vacuum apparatus, *Pressure gages, *Manometers, Gases, Pressure, Measurement.

Measurements with a Knudsen manometer of a new type have shown that it is possible to obtain a linear relation between the manometer deflection and the gas pressure, until the mean free path is only approximately 10-12 times greater than the plate distance. Depending on the type of gas, the manometer shows a deviation which is incompatible with the simple theory, although this deviation can be easily explained by means of the theory of the accommodation coefficient.
