HARMFUL PITCH IN PULP. [1963] [7]p. 3 refs.  
Order from SLA \$1.10      63-18811

Trans. of Svensk Pappers-tidning, 1963, v. 66, no. 3,  
p. 51-54.

DESCRIPTORS: \*Pitch (Material), Flotation (Separation),  
\*Wood pulp.

A test method was developed, based on the principle of  
pulp flotation in aqueous medium, which may be used  
to determine the amount of pitch separated from wood  
fibers. The total amount separated is considered harm-  
ful, since it is not known whether the emulsified portion  
will deposit on parts of the mechanical equipment which  
are continuously in contact with pulp suspension. Fresh  
softwood pitch showed an increased tendency to form  
deposits due to its greater plasticity caused by terpenes  
(Materials--Wood, TT, v. 10, no. 12)      (over)
