Trans. of Teploenergetika (USSR) 1960 [v. 7] no. 3, p. 20-24.

The Mostofin salt gauges can be converted into devices for measuring steam salt contents by fitting them with salt concentrators. Experience with VTI type VoF salt concentrators shows that they may be recommended as additional fittings both to electrical salt gauges now in use and to those under development. The VTI type VoF salt concentrators, which work at atmospheric pressure, are of simple design; relative enrichment is satisfactorily steady, and can be determined at any moment of time; they can be manufactured at power station workshops.
