Based on the present position of the cold pressing tech-

principles of design for shaped components. By means
of ten problems or rules the designer and purchaser of
cold pressed components will be made acquainted with
the most important principles which meet the particu-
lar requirements of this method of production. The

DESCRIPTORS: Gas turbines, Turbine parts, *Gas
turbine rotors, Air cooled, Temperature, Distribution,
Determination, *Analog systems.

The temperature distribution in an air-cooled disk rotor
is determined for a larger number of cases as a function
of the essential parameters by means of an electrical
analogy method. Results are generalized such that they
can be applied for a calculation of cooling of geomet-
rically similar disks independent of the exact shape of
the blade. (Author)
