THEORY OF MULTILAYER COATINGS ON LENSES

Trans. of Optika i Spektroskopiya (USSR) 1957, v. 2,
no. 2, p. 245-253.

DESCRIPTORS: *Coatings, *Dielectric films, *Optics,

The previous theory (Optika i Spektroskopiya 2: 236-244,
1957; available in translation from OTS or SLA \$1.10
as 62-10971) is used for calculating multilayer coatings
for increasing the light transmittance of a lens. New
simple formulas are derived and a graph is suggested.
An optimum composition for 2-, 3-, and 4-layer
coatings, which promote light transmittance over the

The method of effective parameters of a multilayer
coating is used to calculate coefficients of reflec-
tion and transmission of light falling obliquely on a
certain coating. The problem is reduced to an anal-
ogous problem of normal incidence of light on an
"effective" coating. (See also 62-10971)

A preliminary communication is made on the prepara-

merization in the presence of benzoyl peroxide. The
data reported are held to offer a new case of tridi-
mensional polymerization. Copolymerization with
methyl methacrylate is also possible. The rate of poly-
merization can be modified by the use of conventional
