DESCRIPTORS: *Explosions, Air, *Acetylenes,
*Liquid oxygen, Separation, Industrial equipment.

A new method of removing acetylene from air, which provides explosion-proof operation of air separation equipment, was developed. The method is based on the results of investigation of the properties of the acetylene-liquid oxygen system, the dynamic adsorption by silica gel of acetylene from oxygen-nitrogen solutions, and the explosibility of the adsorbents. The method is finding increasing industrial application in large tonnage oxygen plants and also in plants producing technical nitrogen. (Author)
