Trans. of [Khimicheskaya Promyshlennost'] (USSR)
1941, v. 18, no. 22, p. 8-10.

DESCRIPTORS: *Coal, Processing, Mining engineering.

A discussion of large scale extraction of brown coals with various solvents is given and some experimental data reported. Dichloroethane is an advantageous solvent because of its solvent potency and also because its specific gravity, which is close to that of the brown coal, insures intimate contact of the solvent with the charge. A vertical extractor of a design shown in the article may be used with this solvent and as much as 97.6% of montan wax present in the charge can be extracted. (Engineering, TT, v. 6, no. 9) (over)
