DESCRIPTORS: Casting. *Steel. *Titanium. *Boron steel

L36R, 45R, and 20 KhGNR boron steels were ex-
amined. It was concluded that titanium added to boron-
containing steel exerts a strong inhibiting action on
grain growth. A combined deoxidation of boron steel
with silico-calcium (0.2-0.3%) and small additions of
aluminum (0.03%) is very effective. The advisability
of titanium additions depends upon the intended use of
the steel and upon the conditions of its subsequent hot
mechanical and thermal treatments. The addition of
titanium is undesirable for casting-type steels.
