Order from LC or SIA mi\$1.80, ph\$1.80 61-15812

Trans. of Akusherstvo i Ginekologiya (USSR) 1959
[v. 35] no. 3, p. 59-63.

Observations of the motor activity of human fetuses
from 16.5 to 29 weeks of gestation showed that every
reaction (grasping, kicking, sneezing) passes two
phases in its development. The first phase of local
response is the result of heterochronic maturation of
morphological structures, which ensure the above
reaction. The second phase is a whole, integrated
response having an adaptive character, is due to the
integration of mature embryonic structures of the
truncal portion of the brain.
