Trudy (USSR) 1958, v. 35, p. 62-75.

New varieties of wheat that produce exceptionally pro-
tein-rich grain despite a damp growing climate were
developed by crossing spring wheat with spring rye.
Some of the new varieties have more spikelets and
more grains on their spikes than soft spring wheat.
They are highly resistant to such fungus diseases as
wheat rust, smut, and mildew. Previous attempts
were unsuccessful that were made to increase the pro-
tein content in the grain of wheat grown in the damp
(Agriculture--Plant Cultivation, TT, v. 5, no. 8)(over)
