[1961] 4p. 7 refs.

Order from OTS or SLA \$1.10

61-18111

Trans. of Zhurnal Tekhnicheskoi Fiziki (USSR) 1940,
v. 10, no. 12, p. 988-998.

DESCRIPTORS: Ethylenes, Methanes, Carbon com-
pounds, Monoxides, *Heat transfer, *Liquefied gases,
Nitrogen.

The heat conductivity of liquid nitrogen and carbon mon-
oxide were determined within the temperature interval
of from -196 to -160°C ., of methane from -170 to
 -100°C . and of ethylene from -160 to 0°C . The heat
conductivity of all these substances was found to de-
crease in proportion to the rise of the temperature.

 v. 99, no. 5, p. 699-702.

Solid oxygen was studied to verify the thermal and mag-
 netic peculiarities of paramagnets with strong inter-
 action between the magnetic moments, and to investi-
 gate the hypothesis that at low temperatures oxygen is
 antiferromagnetic. Vacuum-colorimeter measurements
 in the vicinity of the 3 phase-transition points of oxygen
 indicated that the $\beta \rightarrow \gamma$ transition is of type I, and the
 $\alpha \rightarrow \beta$ transition of type II (however, the heat capacity
 peak was sharp and its width extended to the resolving-
 power limit of the vacuum colorimeter without adia-
 (Chemistry-Physical, TT, v. 3, no. 12) (over)
