Bron, O. B., Obratov, V. A., and Bron, Ye. M.
A SERIES OF AUTOMATIC DEVICES FOR MAGNETIC FIELD SUPPRESSION. [1960] 14p. 9 refs.
 C. E. Trans. 1584. M2061.
 Origin from: C or SLA ml\$2. 40. ph\$3. 30 61-13420

Trans. of Elektrotekhnika (USSR) 1959, v. 30, no. 9, p. 48-54.

Automatic field suppressors of the new series have insulative mating contacts with silver mating surfaces and reliable mechanical and arc suppressing systems. They are not polarized, and they can be connected for operation without a preliminary forming. The suppressors of the new series for large machines are connected to both poles of the excitation circuit. This furcunands the reliability of field suppression and sometimes makes it possible to abandon a second device for field suppression. In the excitation circuit of the exciter, the duration of field suppression is determined mainly by the damping time of eddy currents, excited (Engineering -Electrical, TT, v. 5, no. 2) (over)
