Some typical patterns proposed for representing adsorption phenomena in mono- or multimolecular layer are studied, according to whether the molecules are mobile or fixed on the surface of the adsorbent. Methods of calculation from experimental data, fundamental quantities, heats and entropies, in particular, are then indicated. (Author) (See also 63-14741)

analysis.

The form taken by the fundamental equations of thermodynamics in the presence of adsorption phenomena is indicated, according to whether or not the properties of the layer adsorbed itself are to be revealed. The heats released by adsorption under different operating conditions are then studied, showing in each instance the role played by surface phenomena proper.
