INFLUENCE OF INORGANIC SALTS ON THE SOLUBILITY OF CAFFEINE, THEOPHYLLINE, AND THEOBROMINE (Vliyanie Neorganicheskikh Soley na Raatvorimost' Kofeyna, Teofilina i Teobromina). Feb 61 [7]p. 6 refs. RTS 1760.

Trans. of Aptechnoye Delo (USSR) 1959 [v. 8] no. 5, p. 30-33.

A study was made of the solubility of caffeine, theophylline, and theobromine in sodium and potassium chloride, bromide, iodide, and thiocyanate solutions of concentrations between 0 and 3M. Sodium and potassium iodide and thiocyanate increase the solubility of these compounds; the chlorides and the sulphates exert a salting-out effect, whereas the bromides have practically no effect on the solubility. A constant which describes the qualitative and quantitative effects of a salt on solubility is proposed. (Author) (Biological Sciences--Pharmacology, TT, v. 5, no. 10)

The paper contains a description of a type of elastic
waves which develops specially on layers. It forms
either characteristic single arrivals which render
parallel time-distance-curves, or a sinusoidal wave
of constant frequency. The interval between two
arrivals or the period of the sinusoidal wave is pro-
portionate to the thickness of the layer. The single
