INTERMOLECULAR INTERACTIONS IN SOLUTIONS
OF POLYMERS. I. INFLUENCE OF VOLUME EF-
FECTS ON SECOND VIRIAL COEFFICIENT. [1960]
8p. (Eng. summary omitted) 32 refs.
Order from LC or SLA mi\$1.80, ph\$1.80 61-15432

Trans. of Vysokomolekulyarnyye Soyedineniya (USSR)
1959, v. 1, p. 1200-1206.

A more accurate evaluation of the influence of intra-
molecular volume effects on the second virial coeffi-
cient of solutions of polymers than was given in previ-
ous theories leads to an essential change in the theory.
On the theory proposed, the A_2 values in good solvents
are considerably higher than on the Casassa-Markovitz
theory, for given chain dimensions, and the depend-
ence of A_2 on the molecular weight is noticeably less
than in the theory given. The Flory-Krigbaum-Orofino
theory leads, in the region of ordinary values for α ,
the coefficient of dissociation, to values for A_2 that
(Chemistry--Physical, TT, v. 5, no. 8) (over)

are close to those predicted by the proposed theory; but it leads to much different results both in poor solvents and in regions of large a , and likewise predicts a considerably weaker dependence of A_2 on the molecular weight than our theory does. Comparison of the various A_2 theories with the experimental data for both poor and good solvents shows that the theory proposed is in much better agreement with experiment than the Flory-Krigbaum-Orofino and Casassa-Markovitz theories.
