DESCRIPTORS: Polymers, *Acrylic acids, *Acryloni-
triles, Hydrolysis, Solubility, Alkali metal compounds,
Hydroxides, Methanols, Propanols, *Soils, Additives.

The present invention relates to a novel process for the
preparation of water soluble polymers of acrylic acid.
It relates in particular to a process of hydrolysis for
converting polymers of acrylonitrile and methacryloni-
trile into water-soluble polymers. (Author)

CONSIDERATIONS ON THE CHARACTERISTICS OF
MASTIC ASPHALT. [1960] [24]p.

Order from SLA ml\$2.70, ph\$4.80 61-10166

Trans. from Giornale del Genio Civile (Italy) 1957,
no. 6.

Results are presented of tests on samples of mastics prepared with bitumens having the same natural origin but a different penetration, and with mineral aggregates of a different type and different granulometry. The characteristics examined on the different mastics were: the cohesiveness, the fragility point at low temperature, the elastic return, the degree of deformation under constant load and the apparent viscosity of the mastics at 160° C. The results show the favorable influence that the long maturation (ripening) undergone through time by natural asphalt has on the technical properties when compared to the reconstituted one. To obtain a mastic with good behavior under working (Materials, TT, v. 5, no. 5) (over)
