AN INVESTIGATION OF THE DISSOCIATION PRES-

[1960] 11p. 12 refs.

Order from LC or SLA mi\$2.40, ph\$3.30 61-15098

Trans. of Moscow U. Vestnik. Ser[iya] Mat[ematiki]
Mekh[aniki] Astron[omi] Fiz[iki] Khim[ii] (USSR)
1958, v. 13, no. 6, p. 181-190.

The vapor pressure of beryllium fluoride was deter-
mined over the range 762 to 1103°C. The vapor pres-
sure of liquid sodium fluoride was determined over the
range 1073 to 1193°C. The dissociation pressure of the
sodium fluoberyllate Na_2BeF_4 was determined over the
range 1009 to 1197°C. The apparent partial pressure of
sodium fluoride over the sodium fluoberyllate is mark-
edly greater than the vapor pressure over pure sodium
fluoride, because of the existence of complex mole-
cules in the vapor phase. (Author)
