DESCRIPTORS: *Chlorides, Methyl ethers, *Polymers.

*Vinyl radicals.

Investigations show that the degree of cross-linking ob-
tained on the chloromethylation of linear styrene copoly-
mers diminishes with increasing content of aliphatic
(not chloromethyl) linkages in the chain. This is ex-
plained by the reduced probability of contact between
phenyl groups in neighbouring macromolecules.

Practical methods for the protection against corrosion
are shown without a theoretical discussion of the
processes of the corrosion itself. Procedures are
described for reducing current exchanges between a
pipe line system and the soil on the one hand and con-
trolling pipe line potentials on the other hand. Various
possibilities for manufacture and pipe-laying tech-

no. 5, p. 1-6.

DESCRIPTORS: *Steam turbines, Velocity.

Graphs and formulae are presented for determining the
efficiency of a double-row velocity stage with complete
and with partial steam admission in a wide range of
geometric and physical parameters. The method was
developed for application to the velocity stage of the
Moscow Institute for Power Engineering and is used
with a combination of blade grids (patterns) KS-1A and
KS-1B. (Translator)
