DESCRIPTORS: \*Stars, \*Optical images, \*Telescopes,  
Optical properties, Atmospheric refraction, Light  
transmission, Vibration, Astrophysics.

An analysis is made of observations of the amplitudes  
of vibrations of star images at different zenith distances  
to determine where the sources of these vibrations are  
localized in the atmosphere. Various observation  
methods are discussed and the data resulting from these  
observations are presented in table form.
