SPELEOLOGICAL OBSERVATIONS IN AIZKIRRI AND  
ITS ENVIRONS (GIPUZCOA). [Dec 58] [18]p. 12 refs.  
Order from SLA \$1.60 61-16516

1. Elosegui, J.

Trans. of Speleol (Spain) 1950, v. 1, no. 2/3, p. 3-22.

DESCRIPTORS: \*Paleoecology, Geology, Spain, \*Caves.

During 1949, the author, occasionally with companions, visited various caves in the Aizkirri region (Gipuzcoa, Spain). While undertaking these speleological excursions he mapped and sketched many of the caverns. The neighborhood of Aizkirri (Gipuzcoa, Spain) is very rich in karstic phenomena, both karstification in actual progress, and the static results of earlier evolution. Aizkirri-kobla presents a partial fossilization with beds of sand and clay containing the remains of Ursus spelaeus and other mammals. Sedimentation took place here in two stages separated by an intervening period of stalagmitization. Anton-kuebia shows traces of earlier (Earth Sciences--Geology, TT, v. 6, no. 7) (over)
