DESCRIPTORS: *Geogony, *Geochemistry, Earth,
Meteorites, Phase studies, Geology.

A study is made of the transformations of each phase
of meteoritic matter and the earth in different con-
ditions of pressure and temperature, and specifically
of the silicate, iron-nickelous, sulfide, chromite, and
other phases, their coaction and the entire course of
their transformations, which they undergo right up to
their analogues in the earth crust.
