KINETICS OF THE DISSOLUTION OF SILICA IN
STEAM. [1963] [12p] Srefs C. E. Trans. 3008.
Order from OTS or SLA \$1.60 63-23978

Trans. of Teploenergetika (USSR) 1962, v. 9, no. 10,
p. 26-31.

DESCRIPTORS: *Steam, *Silicon compounds,
*Dioxides, *Reaction kinetics, Fluosilicic acids,
Solubility, Quartz, Temperature, Pressure.

Results are presented of an experimental investigation
of the kinetics of the dissolution of silica in superheated
steam at pressures of up to 92 ata. Two types of flow
reactors, one with quartz tubes and the other with a
filling of crushed vitreous quartz, were used. The use
of an equation for the kinetics of the dissolution process
demonstrated that the equilibrium silica contents of
steam are different in the case of contact with vitreous

Zenner, R. E.
FACSIMILE TELEGRAPH INSTALLATION. [1960]
2p.
Order from LC or SLA ml\$1.80, ph\$1.80 61-10030

Trans. of patent claims from German patent application T-54845.

An installation is described for the transmission of signals for the control of aeroplanes characterized by the fact that the transmitter is provided with a set of transmitter discs for the transmission of impulses representing flat units (units of area?) of indicating symbols and with a second set of transmitter discs for the transmission of impulses representing units of area of supervisory signalling symbols. In the aeroplane, a single receiver for receiving and recording the various impulses on a recording tape is provided, wherein the indicating symbols are recorded on the recording tape in a row and the supervisory signalling symbols are recorded in another row parallel to the first.

FACTORS IN PERFORMANCE OF LABORATORY
FRACTIONATING COLUMNS. [1951] 6p. 6 refs.
Order from ODS or SLA \$1.10 61-18149

Trudy of Institut Otdel'nykh Khimicheskikh Reaktivov.
Tredy (USSR) 1951, v. 15, p. 3-10.

DESCRIPTORS: *Laboratory equipment. *Fractionation.
*Distilling plants.

When components are fractionated of close boiling
points, reflux formation in a homothermal condenser
depends exclusively upon the amount of liquid in the
latter and is independent of the amount of vapor
entering the condenser per unit time. The dependence
of the reflux formation upon the amount of liquid in the
condenser is a linear function. (Author)
