Seriya Geologicheskaya, 1960 [v. 25] no. 2, p. 91-104.

The paper deals with composition, structure and formation conditions of the complex Variscan alkalic intrusion in the Sandyk Mountains. The miassic type nepheline-syenites first discovered here are described, along with their pseudoleucitic varieties. Daly's hypothesis concerning the genesis of the intrusion rocks is found unacceptable in the light of geological and petrochemical considerations. It is contended that all the intrusion rocks are of a primary (Earth Sciences--Geology, TT, v. 5, no. 7) (over)
