A report is given on a protein-free coagulation activator of plant origin, whose tolerance has been tested in animal experiments and whose influence on the coagulation time in vivo and in vitro and some of whose chemical and coagulation-physiological properties have been shown to be significant in hemophilia therapy. A report is given on a therapeutic agent and its already successful application following hemophilia. (Biological Sciences-Pathology, ET, v. 8, no. 3)

DESCRIPTORS: Pharmacology. *Sulfonamides, Dosage.

*Toxicity.

The chemical and pharmacological properties of
2-sulfanilamido-5-methoxypyrimidine (sulfamethoxy-
diazine) are described. After oral administration the
compound is well absorbed, excellently tolerated and,
in human beings, acetylated only to a small extent.
The slow decrease of the blood level classifies the
compound as a long acting sulfonamide. (Author) (See

A method is described for the dehydration of hydrates.
The method is based on the fact that the hydrate water is
converted by reaction with thionyl chloride or carbonyl
chloride into gaseous compounds (SO₂ or CO₂ and HCl),
which can be separated directly from the anhydrous com-
pounds. The methods are applied to the dehydration of a
series of metal chloride hydrates. The preparation
