THE EFFICIENCY OF CADMIUM SELENIDE LAY-

Order from SLA \$1.60

61-16459

Trans. of Zeitschrift für Physik (West Germany) 1956,
v. 145, p. 597-610.

DESCRIPTORS: *Selenium rectifiers, *Selenides,
Cadmium compounds.

It was found experimentally that the two structures of
the CdSe, i. e. the cubic and the hexagonal one, behave
differently with respect to placement of the excess Cd.
At the cubic CdSe the placement of excess Cd in the
lattice will cut down the electric resistance more than
this is the case for the hexagonal CdS. One may raise
or lower at will the electric resistance by tempering
the samples in Se or Cd vapor, respectively. Accord-

A doping apparatus is described which permits the
production of vaporized layers of several components.
This doping apparatus consists of a rotor equipped
with two or more vaporizers and permits great varia-

the fact that a portion of the stomach has been
moved into the pleural cavity. Remembering this,
will help in preventing such diagnostic errors as
pleurisy and, if effusion does develop, complica-
