Trans. of [Fette Seifen Anstrichmittel] (West
Germany) 1952, v. 54, p. 321-324.

Synthetic detergent raw materials are influenced in a
negative manner by hard water. The cleaning effect
depends on the manner of soiling and the fabric tested.
Nonionic detergents are subject to the negative effect
of hard water as much as anionic compounds. Con-
siderable differences in action exist between synthetic
and natural water hardness. The relationship of Ca to
Mg is more important than the degree of hardness
itself. Magnesium salts thus may be considered for
use as builders for synthetic detergents. (Author)

DESCRIPTORS: *Polarographic analysis, *Electrolysis, Electrodes, Mercury, *Electrochemistry.

A combination of square-wave polarography with the anodic stripping technique is described. Concentration of the metals is carried out by pre-electrolysis at a stationary mercury-drop electrode in a stirred solution. (Chemistry--Analytical, TT, v. 10, no. 12) (over)
