<p>A comparatively accurate measurement of draws between sections can be arranged on continuous drive paper machines, with the help of mechanical or elec- trical differential and tachogenerators. The differ- ences in rpm which can be compared by means of the differential can be "magnified" so that tachogenerator measuring errors will not appreciably affect the final result. The method has been adapted for use on a paper machine equipped with a mechanical differential drive, by using the differential gears in the gear- boxes of the sections as an aid to measurement. Brecht, Walter and Weap, Adam.  
A NEW APPARATUS FOR TESTING FOLDING  
STRENGTH. [1961] [34]p.  
Order from SLA \$3.60 61-20097

Trans. of das Papier (West Germany) 1952, v. 6,  
no. 21/22, p. 443-449 and no. 23/24, p. 496-503.

DESCRIPTORS: \*Paper, Mechanical properties, Test  
equipment.

The range of the pressure folder extends from 20g/m<sup>2</sup>  
to 500 g/m<sup>2</sup>, without reference to the tensile strength.  
Its principle as calculated gives a true picture of the  
fold strength of the sheet. (Author)
