DESCRIPTORS: *Sulfur, *Carbon, Determination,
Iron Industry, Sensitivity, Conductivity, Electro-
chemistry, Recording devices.

Sulphur as well as carbon can be determined in iron-
works materials by measuring the changes in con-
ductivity which take place when the sample is burnt at
about 1350°C in a current of oxygen, and the sulphur
dioxide evolved absorbed in suitable solutions. The
sensitivity of the method is very closely related to the
(Metallurgy, TT, v. 6, no. 9) (over)
