DESCRIPTORS: \*Poisonous gases, \*Chemical warfare  
agents, \*Gas detectors, Determination.

An apparatus is described for detecting small quantities  
of all kinds of combat gases in air, and gases found  
around industries and plants manufacturing halogen-  
substituted materials (viz., carbon tetrachloride, tri-  
chloroethylene, chlorobenzene, and the refrigerants of  
the freon type). The apparatus is small and simple. A  
miniature electric-powered fan drives the air to be  
tested through a small catalyst (pipe) chamber where  
the gas to be cracked is heated over a platinum elec-  
trical coil. The acid products emitted are led onto a
