STUDY ON THE GEOMAGNETIC EFFECT OF THE
F₂ LAYER. [1962] [13]p. 5 refs.
Order from U.S.A \$1.60

62-14060

Trans. of Zeitschrift für Geophysik (West Germany)
1964, v. 20, p. 75-83.

DESCRIPTORS: *Terrestrial magnetism, *Ionosphere,
*Geophysics, Magnetic properties, Analysis.

The influence of the earthmagnetic field on the world-
wide distribution of the critical frequencies f_oF_2 is
examined especially for solstices by means of observa-
tions in 1952. At solstices as at equinox both maxima in
geomagnetic latitudes of about $\pm 30^\circ$ and intermediate
minimum upon the geomagnetic equator are absent in
the early forenoon. The highest critical frequencies
are appearing upon the magnetic equator. At noon the
minimum is to be found about inclination zero; the two

Burkhard, Otto
 STATISTICAL FLUCTUATIONS OF THE F2
 LAYER DENSITIES IN TWO OBSERVATION STA-
 TIONS VERY DIFFERENT FROM ONE ANOTHER. in: In-
 ternational Geophysical Year 1957-1958
 Order from DTIC or NSA 51-10 62-23843

Trans. of Geophys. Assoc. (Quadrantische Schwankungen
 der F2-Schicht-Densitäten an zwei weit voneinander
 entfernten Beobachtungsstationen) Graz, 1955

DESCRIPTION: *Ionosphere, Ionospheric disturbances,
 *Ionization, Statistical functions, Statistical analysis

The simultaneous appearances of short-term ionization
 fluctuations of F2 layers that are a great distance apart
 could be explained by a series of measurements that were
 taken in the same month (January, 1954) in Graz and in
 Graz and Vienna, high correlation values (up to
 r = 0.74) were obtained for recorded observations.
