Knocking, Colloids, *Fuel additives.

In general the addition of tetraethyllead to fuels calls
forth a certain reaction, varying with the type of
fuel, which results in an increase in the knock rating.
This so-called lead sensitivity depends upon the com-
position of the fuel and upon its treatment. It is very
high for the so-called straight-run fuels and com-
(Materials--Fuels, TT, v. 10, no. 3) (over)
