Trans. of Grundlagen der Landtechnik (West Germany).  
1956, v. 7, p. 41-27.

The interrelationship between the soil and agricultural implements is considered. An analysis is made of forces, stresses, and other physical changes of the soil under tillage operations. The theoretical components of work are compared with experimental values. Changes to the physical characteristics of the soil by machine tillage are examined.

From the results on the optimum form of oscillation of

An oscillating plough body, in which the share and
